

contacted, Town Staff recommends that the installation of a waste enclosure and sand corral be carried out adjacent to the east side of Slabtown Bridge.

The attached drawing (attachment 2) outlines the proposed general location of the enclosure and corral. A request for quote, based on the recommended location and standard drawing, for the construction of the enclosure will identify the contractor to complete the work and a timeline.

C. The Blue Mountains' Strategic Plan

This Report furthers the Town's Strategic Plan Goal # 2, "Addressing the Town's municipal infrastructure needs" and #6 "providing a strong well managed municipal government".

D. Environmental Impacts

The construction of this enclosure will require the use of natural resources such as wood and aggregate and the use of non-renewal resources included in the embodied energy of the concrete. However, it is anticipated that the enclosure will assist with reducing litter and retaining the salt pickled winter sand.

E. Budget Impact

The construction of this enclosure will cost between \$2,000 and \$3,000. The Garbage Collection budget (1-455-1000-63305) will cover \$1,000 of the expenditure and Landfill Site budget (1-460-1000-63320) will contribute the remaining amount required to complete this installation.
