

Mississippi Mills Wild Parsnip Weed Control & Options

<https://www.mississippimills.ca/en/live/weedcontrol.asp>

Roadside Spraying

Spraying occurs from the edge of the gravel shoulder to the property limits and uses ClearView herbicide to control the growth of undesirable vegetation. The contractors performing the work are fully licensed. Spraying occurs in areas identified during weed audits.

The following locations will not be sprayed:

- Roadside ditches *maintained through either a No Spray Agreement or Adopt A Road Agreement entered into with the Municipality.*
- 10 metre buffer from freshwater habitat (boom spraying)
- Sprayers are turned off at mailboxes or whenever a pedestrian is nearby

Options for No Spraying - Mississippi Mills Roads

Adopt A Road

A program where groups (minimum 3 individuals) can enter into an agreement with the Municipality of Mississippi Mills to complete various vegetation management activities.

No Spray Agreement

An agreement between the Municipality of Mississippi Mills and a landowner (occupant) who takes alternative vegetation control actions to control noxious weeds within the road allowance adjacent to their lands, and therefore, the Municipality does not spray the zone. Note that a no spray agreement form for each property must be completed.
