Project Manager

Re: **Phase One Environmental Site Assessment**
160 King Street, Town of the Blue Mountains, ON

Dear Mr. Aneja:

Azimuth Environmental Consulting, Inc. (Azimuth) is pleased to provide you (the "Client") with the following report documenting the Phase One Environmental Site Assessment (ESA) conducted at 160 King Street within the Town of The Blue Mountains, Ontario (the "RSC Property" or the "Site").

This assessment was conducted to evaluate potential environmental concerns on the RSC Property associated with past and present Site activities, as well as adjacent land use(s) in accordance with the Ontario Regulation 153/04 (Record of Site Condition [RSC]). This work was completed for a proposed residential development of the RSC Property. The report describes the interpreted environmental conditions at the RSC Property and provides conclusions for your considerations.

The Phase One ESA identified one (1) *potentially contaminating activity* (PCA) on the RSC Property and eight (8) PCAs within the Phase One Study Area. The one (1) on-Site PCA was identified as an *area of potential environmental concern* (APEC) associated with the RSC Property. The other identified APEC was an off-Site PCA immediately adjacent to the RSC Property. As such and based on the findings of the Phase One ESA, a Phase Two Environmental Site Assessment (ESA) is required to confirm the soil quality at the RSC Property before an RSC filing can be conducted.

We trust this report is sufficient for your current requirements and would like to thank you for the opportunity to work with you on this project. Please do not hesitate to contact us if you have any questions.

Yours truly,
AZIMUTH ENVIRONMENTAL CONSULTING, INC.

David Ketcheson, M.A.Sc., P.Eng., QP_{ESA}
Senior Environmental Engineer

1.0 EXECUTIVE SUMMARY

Azimuth Environmental Consulting, Inc. (Azimuth) conducted a Phase One Environmental Site Assessment (ESA) for 160 King Street East¹ in the Village of Thornbury. This property includes a portion of the unopened right-of-way for Wellington Street that lies west of the 160 King Street East parcel in the Town of Blue Mountains, Ontario (Figures 1 and 2). The RSC Property consists of Parts 3 through 6 of the Registered Plan 16R-11658 (the "Site" or the "RSC Property") (Table A).

The RSC Property is rectangular in shape and is 4,597.7 m² or 0.46 hectares (ha) in size (Figure 2). The RSC Property resides within the lands bound by King Street East to the south, Elgin Street North to the west, Grey Street North to the east, and the Georgian Trail to the north, (Figures 1 and 2). The property identification number (PIN) and the legal description of the RSC Property is provided in Table A (below):

Table A: Description of RSC Property

Property	Identification Number (PIN)	Legal Description
160 King Street East	37141-XXXX (LT)	Part of Lots 7 to 9 and Part of Wellington Street, north east side of King Street, Town Plot of Thornbury, being Parts 3, 4, 5 and 6 of Registered Plan 16R-11658; Town of The Blue Mountains

The RSC Property is currently undeveloped meadow. According to the Town of The Blue Mountains Draft Zoning By-Law #2018-65, the RSC Property is zoned C1 – Village Commercial. The directive of this assessment is to determine the actual historic use of the RSC Property. The assessment will also evaluate potential environmental concerns of the RSC Property, associated with past and present Site activities, as well as adjacent land uses.

The RSC Property is found at an elevation of 187 m above mean sea level (masl). The parcel gently slopes from south to north, toward Georgian Bay (Figure 3). Given the granular sediments, precipitation would percolate into the underlying soils at the Site. If excess water existed then it would either be directed to the roadside swale or the ditching along the former railway corridor. The shallow soils beneath the RSC Property consist of sandy silt to silty sand material and overlie a shale bedrock.

Information obtained through the current assessment suggests that the RSC Property has not historically been used (*i.e.*, no structure has been developed upon the Site). The former CNR line immediately north of the RSC Property previously utilized an easement on the original

¹ For the purposes of this report King Street will be assumed to be oriented on an east-west alignment, although it actually lies on a southeast to northwest alignment

land parcel; however no structures were noted as part of the current assessment. The RSC Property has remained undeveloped based on aerial images dating back to 1938.

The Phase One ESA identified one PCA for the RSC Property and eight PCAs for the Phase One Study Area. Based on the information reviewed as part of the current assessment, the historic CN rail line located immediately adjacent to the Site is considered significant, and therefore represents an APEC for the RSC Property (Table B - overleaf). The imported excess soils historically present on the RSC Property is also considered a PCA and therefore is deemed to be an APEC (Table B).

Based upon the information provided above, a Phase Two ESA will be required to be conducted prior to filing an RSC. The Phase Two ESA shall be carried out to determine the absence or presence of actual contamination associated with the APECs identified at the RSC Property.

Table B: Areas of Potential Environmental Concern¹

160 King Street East, Thornbury, ON						
Area of Potential Environmental Concern²		Location of Area of Potential Environmental Concern on the RSC Property	Potentially Contaminating Activity³	Location of PCA (on-Site or off-Site)	Contaminants of Potential Concern⁴	Media Potentially Impacted (Ground water, soil and/ or sediment)
1	Fill Piles	Sporadic piles placed across vacant lands	30 – Importation of Fill Material of Unknown Quality	On-Site	VOCs, PHCs, metals, ORPs	Soils
2	Former CNR rail corridor	Immediately north of RSC Property	46 – Rail Yards, Tracks and Spurs	Off-site	VOCs, PHCs, metals, ORPs, PAHs, CPs, ABNs, OCPs	Soils

- Notes:
- 1 - Refer to clause 16(2)(a), Schedule D, O.Reg. 153/04
 - 2 - Areas of potential environmental concern means the area on, in or under a phase one property where one or more contaminants are potentially present, as determined through the Phase One Environmental Site Assessment, including through,
 - (a) identification of past or present uses on, in or under the phase one property, and
 - (b) identification of potentially contaminating activity.
 - 3 - Potentially contaminating activity means a use or activity set out in Column A of Table 2 of Schedule D that is occurring or has occurred in a Phase One Study Area
 - 4 - When completing this column, identify all contaminants of potential concern using the Method Groups as identified in the Protocol for in the Assessment of Properties under Part XV.1 of the *Environmental Protection Act*, March 9, 2004, amended as of July 1, 2011, as specified below:

List of Method Groups:

ABNs	PCBs	Metals	Electrical Conductivity
CPs	PAHs	As, Sb, Se	Cr (VI)
1,4-Dioxane	THMs	Na	Hg
Dioxins/Furans, PCDDs/PCDFs	VOCs	B-HWS	Methyl Mercury
OCs	BTEX	Cl-	Low or high pH,
PHCs	Ca, Mg	CN-	SAR

- 5 - When submitting a record of site condition for filing, a copy of this table must be attached

2.0 INTRODUCTION

2.1 RSC Property Information

Azimuth Environmental Consulting, Inc. (Azimuth) has been retained by the Property Owner (*i.e.*, Thornbury Hills Limited) to conduct a Phase One Environmental Site Assessment (ESA) at 160 King Street East in the Village of Thornbury, (in the Town of Blue Mountains), Ontario (the "Site" or the "RSC Property") (Figures 1 and 2).

The 160 King Street East parcel is rectangular in shape and is 4,597.7 m² (or approximately 0.46 hectares [ha]) in size. The Site resides within a land parcel bound by King Street East to the south, Elgin Street North to the west, Grey Street North to the east, and the Georgian Trail to the north. The unopened Wellington Street right-of-way (ROW) historically sat between the 150 and 160 King Street lands; but has been incorporated into these two properties. The property identification number (PIN) and the legal description for the RSC Property is provided in Table A.

The RSC Property is currently undeveloped meadow and successional forest land. According to the Town of The Blue Mountains Draft Zoning By-Law #2018-65, the RSC Property is zoned C1 – Village Commercial. The directive of this assessment is to determine the actual historic use of the RSC Property. The assessment will also evaluate potential environmental concerns associated with past and present Site activities, as well as adjacent land uses.

2.2 Contact Information

The representative for the current Owner of the RSC Property is Mr. Charanjit Aneja of Aneja Professional Corporation. Mr. Aneja is the legal representative for the RSC Property. Contact information for Mr. Aneja is provided below:

Thornbury Hills Limited
12 Totten Drive
Brampton, ON
L6R 0P8

Email: Charanjit@aneja.ca
Phone: (905) 564-9100

3.0 SCOPE OF INVESTIGATION

The Phase One ESA was completed to satisfy the intent of the requirements, methodology and practices for a Phase One ESA as described in Ontario Regulation 153/04, as amended (Phase One ESA requirements).

This included:

- a review of records and reports regarding historical and current uses, occupancy, and activities for the RSC Property and for the Phase One Study Area;
- interviews with available individuals having knowledge of current and/ or past Site activities;
- an inspection of the RSC Property and observation of the Phase One Study Area; and
- evaluation of the information and documentation of the results of the review.

The observations recorded during the Site visit and the information obtained from the records review are discussed in this report. Sampling and analysis of soil, ground water or other materials (*e.g.*, construction materials, air) were not carried out as part of the Phase One ESA.

Azimuth understands that the Phase One ESA has been requested for due diligence and the filing of a RSC for the Site. The purpose of the Phase One ESA was to identify, through a non-intrusive investigation, the existence of any significant actual or potential contamination associated with the RSC Property. The results of the Phase One ESA provide a recommendation for requirement of any further intrusive environmental assessment (Phase Two ESA) to confirm soil or/ and ground water conditions at the RSC Property.

4.0 RECORDS REVIEW

The purpose of the review of historical records is to obtain relevant environmental information on the current and past uses of the RSC Property and Phase One Study Area and to identify activities at or in the vicinity of the RSC Property that could create a potential environmental concern.

4.1 General

4.1.1 Phase One Study Area Determination

The “Phase One Study Area” includes all properties located wholly or partially within 250 m of the nearest point on the boundary of the RSC Property (Figure 3). Our evaluation did not identify any properties (in whole or in part) that were situated beyond 250 m of the RSC Property boundary that warranted consideration. The properties within the Phase One Study Area and their current uses are listed in Table C (below).

Table C: Phase One Study Area Land Use

Address/ Parcel Block Name	Current Use
108 Arthur Street East	Crown Storage Corp.
3 Grey Street North	Blue Mountain Chamber of Commerce
5 Grey Street North	SOS Storage on Site

Table C: Phase One Study Area Land Use

Address/ Parcel Block Name	Current Use
6 Elgin Street	Carquest Thornbury
14 Elgin Street	Thornbury Steel Fabricators
35 Elgin Street	Breaker Technology Ltd.
21 King Street East	Tigs Store
75 King Street East	Thornbury Veterinary Hospital
78 King Street East	The Blue Mountains Community Health Centre
81 King Street East	The Orchid Restaurant
87 King Street East	Undeveloped gravel lot
90 King Street East	Thornbury Village Cidery
99 King Street East	Kings Court Shopping Centre with the following tenants: • Cedarport Window and Door Centre • Shelter Interior Design • Kingpost Builders • Floor Crafters • Ashtons • Thornbury Antique Market • Ashanti Coffee • Calen Ireland School of Dance • Corinthain Kitchens • Mullins Pet Market • Niagara Escarpment Commission
115 King Street East	Thornbury Dental
125 King Street East	Vacant lot with driveway and electrical meter (former Oakley's Field Fresh farm stand)
131 King Street East	Single lot residential
135 King Street East	Promotions Custom Casuals and Embroidery
137 King Street East	Single lot residential
141 King Street East	Penny's Motel
150 King Street East	Vacant lot
151 King Street East	City Stone
161 King Street East	Beaver Motel
171 King Street East	Vacant building – former IGA grocery store
199 King Street East	Steve's Restaurant (closed)
Huron Street East Residences	Single lot residential
McAuley Street Residences	Single lot residential
Louisa Street East Residences	Single lot residential
Arthur Street East Residences	Single lot residential
Bay Street East Residences	Single lot residential
PIN 37141-0085	Georgian Trail (historic railway corridor)
PIN 37141-0089	Georgian Trail
PIN 37140-0173	Vacant forested lot
PIN 37140-0204	Bayview Park

Notes Uses in **Red** and **Bold** are those activities typically considered to be Potential Contaminating Activities (PCAs)
(the actually PCAs to be identified for the RSC Property could be less due to the separation distance and orientation relative to the Site [i.e., down gradient location to the Phase One ESA])

4.1.2 First Developed Use Determination

Information obtained through the current assessment suggests that the RSC Property has not historically been used (i.e., no structure has been developed upon the land). The former CNR line immediately north of the RSC Property previously utilized an easement on the Site; however no structures have been noted as part of the current assessment. The RSC Property is

undeveloped land based on the historical aerial photographs that extend back to 1938, as reviewed as part of Section 4.7.1.

4.1.3 Fire Insurance Plans

An online search of the Catalogue of Canadian Fire Insurance Plans (FIP) for 1875-1975 contained one record for Thornbury, Ontario for 1890. The record does not include a detailed map of the Phase One Study Area; however the key plan identifies the RSC Property and surrounding area in relation to the downtown area to the west. The key plan indicates the presence of the existing road network and the Grand Truck Railway along the current Georgian Trail alignment. The key plan identifies the land between King Street, Huron Street, Elgin Street, and Mill Street as Station Grounds, and identifies a station structure in the southeast corner of the grounds. This station would be in the vicinity of 90 King Street East. The key plan also indicates “S.W.D.” which is assumed to mean “scattered with dwellings” in the blocks between Mill Pond, King Street, Wellington Street, and Arthur Street. This area correlates with a historic residential area in vicinity to the RSC Property. No structures are identified within the RSC Property.

4.1.4 Chain of Title

A chain of title search was performed using Ontario Land Registry Access website. According to the chain of title, the RSC Property was originally divided into five (5) parcels consisting of half or one acre lots when granted from the Crown circa 1857 and the right-of-way. The collection of parcels were purchased and sold by different individuals over time. In about the mid 20th century, the Smith family massed these holdings into the parcels now registered in the Land Titles Office.

4.1.5 Environmental Reports

Three (3) previously completed environmental related reports for lands in proximity or on the RSC Property were available for review:

1. *Phase I Environmental Site Assessment – 150 King Street East, Town of Blue Mountains, Ontario*
prepared by Azimuth Environmental Consulting, Inc., April 2019.
2. *Scoped Phase II Environmental Site Assessment – 150 King Street, Thornbury, ON*
prepared by Azimuth Environmental Consulting, Inc., June 2019.
3. *Proposed Three-Storey Hotel - Geotechnical Report*
prepared by EXP, April 2020

A brief synopsis of each of these reports is provided below:

1. Phase I Environmental Site Assessment, 150 King Street, Town of Blue Mountains, ON – Azimuth (2019)

- an EcoLog ERIS search was conducted as highlighted in Section 4.2;
- search of the Brownfields Environmental Registry identified one (1) record for the Municipality of The Blue Mountains within the Phase 1 study area located at 53, 63, and 69 King St. E. where the parcels were previously part of a former UPI bulk petroleum plan, and a Phase I and II ESA were prepared for an RSC submission. A search of the Record of Site Condition database did not list any records within the Phase One study area;
- search of the on-line National Pollutant Release Inventory (NPRI) identified one (1) record for Breaker Technology Ltd. at 35 Elgin St. for operation of industrial machine manufacturing facility. This record is considered a significant potential environmental concern toward the RSC Property;
- a Freedom of Information (FOI) request was submitted, a response has been received indicating no records were located;
- search of the city directory was completed having identified no records for the Municipality of Thornbury or The Blue Mountains;
- aerial photography was reviewed from 1938, 1955, 1962, 1973, 1988, and 2010. The following was identified to present an environmental concern toward the Phase I Property: a Canadian Pacific Rail line is present to the north of the Phase I property (1938), small fill piles may be present on the RSC Property, a pump island is noted at 63 King St. E., and small fill piles are noted at 35 Elgin St. (1988);
- the Site is located within the Beaver Valley Physiographic Region;
- the Site is found at approximately 190 masl, and runoff is expected to follow the gentle surface grade from the south to north. Soils are classified as Brighton sand, and classified within hydrologic soil group “A” with low runoff potential and high infiltration rates;
- surficial materials consists of sand, gravelly sand, and gravel associated with drained sand or gravel;
- the Ontario Geologic Survey defines bedrock being composed of shale and minor limestone of the Blue Mountain Formation which is Upper Ordovician in age, and found at a depth of approximately 15 to 30 m below ground surface (mbgs);
- small fill piles were identified on the eastern half of the parcel in the 1988 aerial photography;
- three (3) well records were found within the Phase I property: 25-02573, 72-62531, and 25-02574. Water well record 72-62531 did not contain any construction details. The remaining two (2) water well records indicated sandy clay at surface, with one record encountering sand over shale, and the second well identifying diamicton, gravel and additional clay over shale bedrock;
- no storage tank or waste disposal records are present for the RSC Property;
- an interview was conducted with Mr. Dan Halos of Royal LePage, representing both the buyer and the seller. The interview was conducted over the phone between 9:00 am –

9:30 am on April 5, 2019. The RSC Property was purchased in 2016, not aware of any development, imported fill, historic well or septic systems at the Site. Municipal services (gas, water and sewer) are available to the RSC Property off King St. E. Not aware of any environmental issues at the RSC Property; and

- a Site reconnaissance was conducted April 3, 2019 between 9:00 am – 11:00 am by Azimuth. No structures or driveways are present, and lands are composed of overgrown grass, shrubs and trees. The Site is not serviced, and a fire and camp site with trace garbage. The risk of designated substances is low as no structures are present;
- eight (8) PCAs were identified through the study. One (1) was located at the RSC Property where fill piles were observed. Seven (7) were located within the Phase One Study Area:
 - small fill piles were noted on the RSC Property in the 1988 aerial photograph (PCA No.: 30);
 - fill piles observed in 1988 aerial photograph were not observed during Site visit and vegetation growth at select locations – *not deemed to be an APEC*;
 - small fill piles were noted at 35 Elgin St. in the 1988 photograph (PCA No.: 30);
 - no evidence to suggest significant contamination, property also situated down gradient – *not deemed to be an APEC*;
 - a metal fabricator is located at 14 Elgin St. N. from the Site Reconnaissance (PCA No.: 34);
 - no evidence of any significant product release has occurred – *not deemed to be an APEC*;
 - the Georgian Trail was historically the Canadian National Railway since the 1800s (PCA No.: 46);
 - no evidence of large scale contamination from historic CN railway – *not deemed to be an APEC*;
 - a rock breaking equipment manufacturing factory was historically located at 35 Elgin St. N. (PCA No.: NA);
 - no evidence to suggest significant contamination has occurred at the property, in addition the property also situated down gradient – *not deemed to be an APEC*;
 - current and historic use of 90 King St. E. as an apple processing plant and cider production (PCA #NA);
 - no evidence to suggest significant contamination has occurred at the property, in addition ground water flow is tangential to the RSC Property – *not deemed to be an APEC*;
 - a diesel fuel spill of 400 L at 99 King St. E. in 2005 (PCA No.: NA); and
 - location of spill is located tangential to the RSC Property – *not deemed to be an APEC*;
 - a demolition company was historically located at 90 King St. E. (PCA No.: NA);
 - no evidence to suggest significant contamination has occurred at the property, in addition ground water flow is tangential to the RSC Property – *not deemed to be an APEC*.

- no APECs were reported in this evaluation.

The remainder of this evaluation will include comment for each information source, and include additional details if present.

2. Scoped Phase II Environmental Site Assessment, 150 King Street, Thornbury, ON – Azimuth (2019)

- a due diligence exercise completed by the owner as requested by a financial institution for the purchase/ sale of the property. Specifically, this evaluation will be completed for the purpose to confirm the presence/ absence of any potential contamination on the Site. Evaluation was completed to CSA Standards;
- in the absence of any identified areas of potential environmental concern, various targeted subsurface locations were selected. Soil samples were submitted for metals and/ or petroleum hydrocarbons (PHCs) analysis;
- six (6) test pits were advanced between 0.6 and 2.2 mbgs using a track mounted backhoe. Soils were visually and olfactory inspected, as well as tested with a portable gas detector;
- five (5) soil samples were collected and submitted to Caduceon Laboratories. Analytical results were compared to O.Reg. 153/04 MECP Table 2 Full Depth Generic Site Condition Standards in a Potable Ground Water Condition for Residential/ Parkland/ Institutional Property Use for coarse textured soils; and
- no detections of any metals or PHCs of any parameters above the applicable site condition standard.

3. Proposed Three-Storey Hotel – EXP (2020)

- a geotechnical investigation of the RSC Property and other lands was conducted to support a proposed commercial hotel development;
- eight (8) boreholes were drilled on and off the RSC Property to a maximum depth of 6.5 mbgs;
- three (3) of the boreholes were instrumented with a ground water monitoring well;
- topsoil found in the upper 0.05 to 0.15 m in some boreholes;
- disturbed soils extended to a depth of up to 1.4 mbgs;
- a native sandy silt horizon existed beneath the upper disturbed soils. Materials were loose to compact and moisture content was 7 to 17%;
- a discontinuous silt deposit was encountered in BH4 and extended to 1.6 m depth;
- the same silt deposit was encountered in BH5 from 1.4 to 2.1 m depth;
- a very dense sandy silt till was encountered in BH1 through BH5 at a depth of about 4.6 m and continued to the bottom of the boreholes;
- ground water condition was "perched" in some near surface soils;
- ground water condition was also "perched" over the sandy silt till unit at depth;
- ground water condition a week after drilling (i.e., 31-Mar-20) was at 184 masl in BH1 at the west end of the RSC property (i.e., 2.6 mbgs) and at 185.8 masl in BH3 near the ROW

(i.e., 2.7 mbgs) and at ground surface or 186.3 masl in BH5 at the east end of the RSC Property;

- the estimated T-times for the soil samples using grain size analyses was 20 to 50 min/cm. This was based on a shallow soil sample and the underlying till soil sample;

4.2 Environmental Source Information

An EcoLog ERIS database search was conducted for the RSC Property prepared and dated June 24, 2021 as a part of Azimuth's Phase One ESA. The EcoLog ERIS search evaluated the RSC Property including a 0.25 km buffer for records in over 70 federal and provincial environmental databases.

The following records identified:

- two (2) Certificates of Approvals for air emissions from Breaker Technology Ltd. at 35 Elgin St. N. (2006) and 90 King St. E. (1988)
– *not considered a significant environmental concern;*
- one (1) Environmental Activity and Sector Registry record for Thornbury Castle Inc. at 35 Elgin St. for heating (2014)
– *not considered a significant environmental concern;*
- five (5) Environmental Registry records: three (3) for Breaker Technology Ltd. at 35 Elgin St. N. for air and sewage emissions, and two (2) for Ashanit Coffee Estate at 90 King St. E.
– *not considered a significant environmental concern;*
- four (4) Environmental Compliance Approval records: two (2) for Breaker Technology Ltd. at 35 Elgin St. N., and two (2) for Ashanti Coffee Estate at 90 King St. E., each for air/noise emissions
– *not considered a significant environmental concern;*
- five (5) ERIS Historical search records
– *not considered a significant environmental concern;*
- thirteen (13) Ontario Reg. 347 Waste generator Summary records:
 - eleven (11) for Teledyne Canada/ Breaker Technology Ltd. at 35 Elgin St. N. as a manufacture of construction equipment, and lists waste oil & lubricants, PCBs, petroleum distillates, and solvent waste classes (1986 – present);
 - one (1) for Thornbury Village Cidery Inc. at 90 King St. E. for waste oil & lubricants (since 2007),
 - one (1) for San-Mar Environmental Group Ltd. at 90 King St. E. for generation of various waste classes under wrecking and demo operations (1997 - 2001)
– *each of these records are considered a significant potential environmental concern toward the RSC Property;*
- one (1) National Pollutant Release Inventory record for Breaker Technology Ltd. at 35 Elgin St. N. for operation of industrial machine manufacturing facility

- *this record is considered a significant potential environmental concern toward the RSC Property;*
- four (4) Scott's Manufacturing records:
 - two (2) for 35 Elgin St. N. for the manufacturing of construction and mining equipment (1961), and
 - two (2) for 14 Elgin St. S. for metal product manufacturing (since 2004)
 - *each of these records are considered a significant potential environmental concern toward the RSC Property;*
- one (1) Ontario Spill record for Roseman Transport Ltd. for 400 L of diesel fuel to the parking lot at 99 King St. E. (2005)
 - *this record is considered a significant potential environmental concern toward the RSC Property;*
- three (3) Water Well Information System records
 - *not considered a significant environmental concern;* and
- fifty-eight (58) unplotable records within the Phase One Study Area, with one (1) record considered relevant:
 - one (1) *Compliance* and Conviction record for San-Mar Environmental Group for the operation of a waste management system without approval and have demolition waste on site without approval (1999)
 - *this record is considered a significant potential environmental concern toward the RSC Property;*

The significance of these records is discussed in Section 7.0.

4.3 Brownfields Environmental Site Registry

A search was performed of the “Brownfields Environmental Site Registry” operated by the MECP ([http://www.environet.ene.gov.on.ca/besr-public/generalSearch.do?action= display&](http://www.environet.ene.gov.on.ca/besr-public/generalSearch.do?action=display&)) as a part of Azimuth's 2019 Phase One ESA. This on-line registry was developed to record all site remediation work being filed under the Environmental Protection Act (Record of Site Condition O. Reg. 153/04 [as amended]). This search remains current as it is two years removed from this current evaluation.

4.4 National Pollutant Release Inventory

Azimuth's 2019 Phase One ESA completed a search of the on-line National Pollutant Release Inventory (NPRI) (<http://www.ec.gc.ca/inrp-npri/>).

This search remains current as it is two years removed from this current evaluation. The search identified one (1) NPRI record for Breaker Technology Ltd. at 35 Elgin St. for operation of industrial machine manufacturing facility. This record is considered a significant potential environmental concern toward the RSC Property and is discussed in Section 7.0. No new additional information is available to include.

4.5 MECP Records/FOI Search

A Freedom of Information (FOI) request was submitted March 2, 2021 to the MECP for the RSC Property. Currently, the MECP FOI offices have been shut down due to the ongoing COVID-19 global pandemic. A response from the MECP was received August 19, 2021 and reviewed by Azimuth with the result that no information and no records were located responsive to the RSC Property. MECP databases containing records of historic spills, orders and complaints were also searched through EcoLog ERIS.

4.6 City Directory

A city directory search was completed through EcoLog ERIS in Azimuth's 2019 Phase I ESA. The results of the report indicate that no city directory records are available for the Village of Thornbury in Municipality of The Blue Mountains.

4.7 Physical Setting Sources

4.7.1 Aerial Photographs

Available historical aerial photographs are sought on a 10-year frequency to document significant changes in the property uses in the Phase One Study Area. The scale of the aerial photographs may limit the definition of the RSC Property. Therefore it may only be possible to make general comments, based upon the interpretation of the photographs. The historical aerial photographs and current topographic mapping show the general land use and topographic relief of the Phase One Study Area.

Historical aerial photography from 1938, 1954, 1962, 1973, 1988 (Figures 4 to 8) and were obtained from the National Air Photo Library for the Phase One Study Area. Also, on-line aerial photography was obtained from VuMaps / First Base Solutions which have coverage from 2001 onward (Figures 9 and 10).

A summary of the key findings from the aerial photograph interpretation is presented in Table D (overleaf).

Table D: Summary of Historical Aerial Photography Analysis

Year	Subject Property Land Use	Surrounding Area
1938 Figure 4	The RSC Property appears to be composed of undeveloped meadow and forest land;	- King Street East, Wellington Street South, Louisa Street East, McAuley Street South, Elgin Street South, and the CPR line are present; - Residential homes are present along Elgin Street South, McAuley Street South, and Wellington Street South; - Structures are present at 21, 78, 90, 115 King Street East, PIN 37888-0000, and along the south side of King Street East; - Surrounding land use is composed of undeveloped forest or meadow land; - Some land to the south of Louisa Street East appears to be used as an orchard;
1954 Figure 5	No significant changes to the RSC Property;	- Structures are present at 99 King Street East; - Bay Street East and Huron Street East are present; - The structure previous noted at 78 King Street is no longer present;
1962 Figure 6	No significant changes to the RSC Property;	- Arthur Street East is now present; - A structure is present within 35 Elgin Street - A structure is present within 161 King Street East; - Additional structures are now present on the north side of Arthur Street, west of the Elgin Street intersection; - The structure at 108 Arthur Street East is now present; - A structure is noted in the northeast corner of 90 King Street East in proximity to the “station” noted in the first insurance plans in Section 4.1.2; - Additional residential homes are now present along Bay Street East;
1973 Figure 7	No significant changes to the RSC Property;	- The structure footprint within 35 Elgin Street has expanded; - There are additional structures/homes along the south side of King Street East; - Additional land near the Wellington Street South and the Arthur Street East intersection is being used for orchard agricultural production; - Disturbed land and a driveway is present within 125 King Street East; - The structure within 14 Elgin Street is now present;
1988 Figure 8	- No significant changes to the RSC Property; - Small fill piles may be present across the parcel;	- Arthur Street now extends east, past the Elgin Street intersection. Residential homes are present on the north and south sides of the extension; - Additional expansions to the 35 Elgin Street structure are noted. The parcel is now accessible from Grey Street North on the east side of the parcel. Some miscellaneous product storage is apparent along the Grey Street North access road; - The motel is now present at 141 King Street East; - There is a extension on the south side of the CNR line connecting lots on the north side of King Street East with rail loading / unloading access; - The “station” building previously noted at 90 King Street East is no longer present; - Some fill piles are noted along the south side of the Grey Street North entrance to the 35 Elgin Street parcel;

Table D: Summary of Historical Aerial Photography Analysis

Year	Subject Property Land Use	Surrounding Area
1988 Figure 8 (cont'd)		• A structure is present within the 5 Grey Street North and 199 King Street East parcels
2010 Figure 9	• No significant changes to the RSC Property; • Rock boulders are noted along the east parcel boundary along the Georgian Trail;	• The Georgian Trail is present; • The 6 Elgin Street parcel has been cleared and graded and is composed of bare soil; • The western half of the 90 King Street East structure has been removed. The surrounding area is composed of bare ground; • The self storage is now present at 5 Grey Street North; • The existing structure is now present at 3 Grey Street North; • The grocery store is present at 171 King Street East; • There are no structures present at 125 King Street North. The parcel has a paved driveway and an area of sparse vegetation where a former structure may have been; • Some bare soil is noted along Elgin Street on 150 King Street East in the northwest area of the property;
2015 Figure 10	• No significant changes to the RSC Property.	• Some commercial property development continues along King St. East.

The historical aerial photography confirms the undeveloped or grassland use of the RSC Property. The adjacent land uses appear to have remained principally agricultural with residential redevelopment over the years. Based on the review historical aerial photographs, the associated imported fill material was brought to the RSC Property at the time of the train stations decommissioning. As such, these activities are considered PCAs under O.Reg. 153/04.

The significance of these records is discussed in Section 7.0.

4.7.2 Physiography

The RSC Property is located within the Beaver Valley Physiographic Region of Ontario (Chapman & Putnam, 1984). The Beaver Valley is a small but well defined area between Griersville Rock to the west and the Blue Mountains Peaks to the east. The area was eroded by a pre-glacial river into Georgian Bay, which carved a deep valley into the subsurface.

4.7.3 Topography and Drainage

The RSC Property is found at an approximate elevation of 187 masl. The Phase One Study Area gently slopes from south to north, toward Georgian Bay (Figure 3). Given the granular sediments, precipitation would percolate into the underlying soils at the Site. If excess water existed then it would either be directed to the roadside swale or the ditching along the former railway corridor.

The soils at the RSC Property are classified as Brighton sand (Hoffman *et al*, 1962). This soil is a well sorted sandy outwash material with good drainage. Brighton sand is classified within hydrologic soil group “A”. Group A soils have low runoff potential and high infiltration rates even when thoroughly wet, and consist of deep, well to excessively drained sand or gravel.

4.7.4 Quaternary Geology

According to Barnett *et al.* (1991) the surficial material at the RSC Property consists of glaciolacustrine deposits composed of sand, gravelly sand, and gravel associated with near shore and beach deposits. As noted in the EXP (2020) geotechnical report, a sandy silt till horizon exists below this surficial deposition and may extend to the bedrock contact.

4.7.5 Bedrock Geology

The underlying bedrock geology has been described by the Ontario Geologic Survey (OGS) as being composed of shale and minor limestone of the Blue Mountain Formation (OGS, 2016). The Blue Mountain Formation is Upper Ordovician in age. The bedrock is found at a depth of approximately 30 mbgs.

The nearest bedrock well (WWR No.: 25-02573) is located approximately 55 m south. According to this well record, the bedrock contact occurs at about 27.4 mbgs.

4.7.6 Excess Soils

Some evidence of sporadic excess soils were noted in the 1988 aerial photograph image. This image shows small discrete patches of disturbed land and/ or fill piles over the majority of the RSC Property. No significant fill piles were noted at the parcel during the Site visit. Boulders were noted along the north parcel boundary along the Georgian Trail; however these are not considered “fill” as part of the current assessment. The ground area of the RSC Property did not contain significant vegetation growth, but this was determined to be due to the season (early spring) and the gravelly nature of the uppermost soil. Historic images of the Site captured through Google Street View for 2011, 2012, 2015, and 2018 display grass, shrub, or tree vegetation.

4.7.7 Hydrogeology and Well Records

The Ontario Ministry of Environment, Conservation and Parks (MECP) Water Well Records (Appendix E) were referenced for any recorded well information within the vicinity (~250 m) of the centre of the RSC Property (Table E). The Phase One Study Area is currently serviced with municipal water. Water Well Records can be used to gain subsurface information which can provide insight into geological formations within the area.

Table E: Water Well Database Summary¹

Well ID	Direction from Phase I Property	Distance from centre of RSC Property (m)	Elevation (masl)	Date Drilled	Static Water Level (mbgs)	Total Depth (m)	Well Type	Primary Use
73-68603	S	34	189	04-Sep-20	-	6.1	Overburden	Monitoring
73-68605	S	40	189	04-Sep-20	4.5	6.1	Overburden	Monitoring
73-68604	S	54	189	04-Sep-20	1.5	6.1	Overburden	Monitoring
25-02573	S	55	189	01-Dec-61	-	27.4	Bedrock	Abandoned
72-62531	NW	145	188	26-Apr-16	-	-	-	-
25-02574	SSW	248	196	20-Dec-67	-	34.1	Bedrock	Domestic
25-02842	W	280	183	07-May-69	7.5	22.9	Overburden	Domestic
25-02843	W	285	184	13-May-69	-	32.9	Bedrock	Municipal

Notes: ¹ - values rounded for presentation purposes

Only eight wells were located within 250 m of the RSC Property. Two of the wells were drilled for a domestic supply; but deep within the profile. One of the wells was abandoned due to lack of water supply; but it was also drilled deep within the profile. A recent well record did not contain information related to the well use or construction. However, the recent construction in 2016 is anticipated to be for exploration work (*i.e.*, test/ monitoring wells). Three shallow monitoring wells (*i.e.*, 6 mbgs) were drilled on a property directly south of the RSC Property on the south side of King Street East. The reported ground water depth varied from 1.5 to 4.5 mbgs. Similarly and as outlined in Section 4.1.5, three ground water piezometer wells were constructed on and west the RSC Property as part of a geotechnical investigation. The reported ground water elevations were from 184 masl at the west end of 150 King Street East to 186 masl at the east end of the Site. However, these water levels were collected from the underlying till unit and do not necessary reflect the water table condition in the overlying sand unit. Finally two relatively deep test wells were drilled to the west of the RSC Property and pump tested in 1969.

Several wells were drilled to the bedrock contact which was reported to be a shale formation. The shale bedrock contact was reported to be between 27.4 and 34.1 mbgs. Overburden material descriptions for these wells varied from sand & gravel & boulders to clay hardpan. The monitoring wells installed across King Street East reported silty sand to sandy silt with some gravel. The on-Site boreholes report a loose to compact sandy silt unit overlying a very dense sandy silt till.

4.8 Site Operating Records

4.8.1 Inventory of Storage Tanks

No storage tanks are located at the RSC Property. This is anticipated due to the undeveloped nature of the Site.

4.8.2 Underground Utility Drawings

A public locate request was not completed for the RSC Property. According to information from the Interview (Section 5.0) natural gas, water, and sewer services are available in the Phase One Study Area; but these lines do not enter the RSC Property.

4.8.3 Waste Disposal Records

No waste disposal records are available for the RSC Property. This is anticipated due to the undeveloped nature of the parcel.

5.0 INTERVIEWS

No new interview has been completed since 2019. No developments or activities have occurred on the lands since the 2019 review.

An interview was conducted with Dan Halos of Royal LePage Trinity. Mr. Halos was representing both the buyer and seller in the real estate transaction, and is also the son of the past owner of the RSC Property. The interview was completed over the phone between 9:00 am – 9:30 am on April 5, 2019. The following points summarize the key information derived from these interviews (in no particular order of importance):

- the RSC Property was purchased in 2016. The RSC Property has not been used over the period of ownership;
- Mr. Halos is not aware of any previous use or development of the RSC Property;
- the owner of the RSC Property also owns the adjacent parcel to the southeast, between King Street East, the Georgian Trail, and Elgin Street North (i.e., 150 King Street East);
- Mr. Halos is not aware of any fill being brought to the RSC Property;
- Mr. Halos is not aware of any historic well or septic systems present at the RSC Property. There is currently municipal gas, water, and sewer available to the RSC Property; however, these services do not enter the parcel;
- Mr. Halos is not aware of any environmental issues at the RSC Property or within the Phase One Study Area;

No other relevant environmental information was provided for the RSC Property.

6.0 SITE RECONNAISSANCE

6.1 General Requirements

A Site reconnaissance visit was conducted in on March 25, 2021 between the hours of 10:30 am and 12:30 am by Mr. Ian Acheson of Azimuth. This Site reconnaissance included a visual inspection of the ground surface of the RSC Property and a visual inspection of adjacent properties from the road surface within the Phase One Study Area. The following section is a summary of information relating to potential areas of environmental concern.

6.2 Observations at RSC Property

6.2.1 General Observations and Site Layout

The RSC Property is bound by King Street East to the south, 150 King Street East to the west, the Georgian Trail to the north. The eastern boundary abuts lands owned by the Municipality that are just north of Grey Street North. There are no driveways onto the RSC Property. The Site does not contain any structures, and the land is composed of overgrown grass, shrubs, and trees.

6.2.2 Site Infrastructure

There are no structures at the RSC Property. No evidence of historical infrastructure (wells, septic, building foundations, driveways) was noted at the RSC Property.

6.2.3 Site Servicing

The Phase One Study Area is serviced with municipal water, municipal sewer, and gas. Overhead hydro lines are present on the north and south sides of King Street East.

6.2.4 Exterior Activities and Observations

The exterior land at the RSC Property is composed of overgrown grass, bare ground, shrubs, and tree vegetation. There are no structures present at the RSC Property.

Ponded water was present in the low lying areas in the northwest end of the 150 King Street East parcel and along the boundary with the Georgian Trail.

Three (3) stand pipes were identified on and west of the RSC Property. These pipes were labeled BH1, BH2, and BH3. The consultant EXP was noted along the lengths of these wells. From the EXP (2020) report it was possible to determine the corresponding identification number as shown in Table F. Details of each are presented below:

Table F: Ground Water Elevations

Standpipe ID	EXP ID	Stick-Up Height (m)	Depth to Water (m)	Water Elevation (masl)	Depth to Bottom (m)
BH1	BH1	0.96	3.68	183.8	7.25
BH2	BH5	0.95	1.06	186.2	5.86
BH3	BH3	0.95	2.55	186.9	5.62

These potentiometric readings are similar to that reported by EXP (2020) (Section 4.1.5). The readings are from piezometers constructed into the underlying sandy silt till unit. A "perched" water table condition is expected to exist at the till contact.

Two wooden stakes with flag markers were located along King Street East within the RSC Property. The markers located a metal control survey in the ground. This marker is used as a benchmark for topographic surveys.

The boundary between the RSC Property and the Georgian Trail contained a number of large boulders (20-50 cm in diameter). A pile of wood logs were present on or immediately east of the RSC Property within a treed area.

No significant ground staining was noted across the RSC Property. Although much of the Site contains a mixture of bare earth and dead grass, this was likely representative of the season (early spring) and not due to significant surficial contamination at the RSC Property.

Fill piles noted on the 1988 aerial photograph were not observed to be at the RSC Property. Macro-contours observed along the ground surface across the parcels could reflect weathered forms of these fill piles.

6.2.5 Designated Substance Survey of the RSC Property

A designated substance survey (DSS) was not completed for the RSC Property. Designated substances include acrylonitrile, asbestos, arsenic, benzene, coke oven emissions, ethylene oxide, isocyanates, lead, mercury, silica, and vinyl chloride. Though not a designated substance, polychlorinated biphenyls (PCBs) are often included in this list.

Since there are currently no structures present at the RSC Property, the possibility that designated substances present at the Site is negligible.

6.3 Phase One Study Area Investigation

The RSC Property lies within an industrial, commercial, and residential area of the Town of Blue Mountains (Figure 3). The current land uses within the Phase One Study Area can be found in Table C. A visual inspection was completed for each parcel from the road.

Land to the north of the RSC Property consists of the Georgian Trail. North of the trail are single lot residential homes along Bay Street East (i.e., Bayview Park) and Breaker Technology Limited at 35 Elgin Street North. Breaker Technology Limited is a manufacture of mine, quarry, and construction demolition equipment. The parcel is accessible from Elgin Street North and Grey Street North (truck entrance). The parcel contains numerous steel storage bins, parked trucks, parked cars (assumed to be employee parking). No significant product storage or signs of large scale contamination (i.e., monitoring wells) was noted. A call was made to Breaker Technology on April 17th 2019; however no response was received.

Land to the west consists of a vacant lot (*i.e.*, 150 King Street East). Across Elgin Street North is the Thornbury Village Cidery at 90 King Street East. This building is a large brick building with associated patio and parking area. The building appears to be in use for cider production. This building was reportedly built in the mid 1880s and then rebuilt in 1932 after a fire. The building was rebuilt by John Mitchell of Mitchell Brand Apple Products and was used as an apple processing facility.

Land further west is composed of the Blue Mountains Community Health Centre (78 King Street East), Tigs Store (21 King Street East), The Orchid Restaurant (81 King Street East) and undeveloped gravel lot utilized as a parking lot (87 King Street East). A car parts retail store is located at 6 Elgin Street, and a cold storage facility is located at 108 Arthur Street. The car parts store did not contain any garage doors or appear to offer automotive services. The land around the cold storage building contains a number of wood pallets stored against the structure.

Lands to the southwest of the RSC Property across King Street East (Ontario Highway 26) are where Thornbury Dental (115 King Street East) and the Kings Court Shopping Centre (99 King Street East) are situated. The shopping centre has various tenants, including a number of home improvement/ building stores, a school of dance, pet store, and coffee shop.

Land to the south of the RSC Property is composed of single lot residential homes, a motel (141 King Street East), a counter top retail store (151 King Street East), and a custom embroidery retail store (135 King Street East). There is a vacant lot at 125 King Street East that contains a driveway, gravel areas, and a hydro measuring meter. A historic image of the parcel captured through Google Street View in October of 2012 shows the presence of a large tent and produce market. A sign in the front lawn indicates it is Oakley's Field Fresh farm stand. Land further south contains a metal fabricator shop at 14 Elgin Street South, with two (2) ground water monitors situated along its north property boundary.

Land to the southeast is composed of a second motel (161 King Street East), a vacant lot with three (3) ground water monitors installed at it (formerly grocery store) (171 King Street East), a vacant restaurant (199 King Street East), a self storage facility (5 Grey Street North), and the Blue Mountain Chamber of Commerce (3 Grey Street North). The additional land to the east is composed of single lot residential homes along Bay Street East. The ground water monitors located at the vacant 171 King Street East parcel are speculated to be for a hydrogeological evaluation and not for contaminant identification purposes, as there have been no RSC files found for the property and currently there is a proposed development sign posted at the property. This is not suspected to be of a significant environmental concern to the RSC Property.

The ground water monitors located at 14 Elgin Street are speculated to have been installed for environmental purposes, and should be considered for the purposes of the Phase One ESA being completed for the RSC Property. The proximity of the RSC Property to King Street East

(Ontario Highway 26) presents an environmental concern due to impacts associated with road salting practices. The significance of this is discussed in Section 7.2.2.

7.0 REVIEW AND EVALUATION OF INFORMATION

7.1 Current and Past Uses

The information reviewed as part of this evaluation indicates that the RSC Property has not been previously developed, and in some cases solely held an easement for the adjacent former Canadian National Railway rail line, situated to the north.

7.2 Potentially Contaminating Activity

7.2.1 On-Site Activities

Table G (overleaf) represents the identified PCAs on, in, or under the RSC Property (Figure 11). It is acknowledged that other items beyond those listed in O. Reg. 153/04 (Schedule D – Table 2) could be identified for as PCAs.

Table G: Potentially Contaminating Activities – RSC Property

ID	Potentially Contaminating Activity (O.Reg. 153/04 – Schedule D – Table 2)	Description of Activity	Information Source(s) (Section No.)
On-Site			
1	30	Importation of Fill Material of Unknown Quality Imported fill material of unknown quality was brought to the RSC Property at the time of the train stations decommissioning. Small fill piles are noted on the 1988 aerial photograph	• Aerial Photography (Section 3.6.1) • Site Reconnaissance (Section 6.0)

The RSC Property is currently composed of undeveloped grass and shrub land. In the 1988 aerial image, small fill piles and/ or areas of disturbed ground were noted, particularly in the southeast half of the parcel. The transfer of fill material is considered a PCA (PCA No.: 30) when the quality of the material is unknown. This is due to the potential that the fill material was contaminated in its original location, and this contamination could then be spread to the RSC Property after placement. During the Site visit, no elevated mounds of material were visible. As noted above, boulders were noted along the northeast parcel boundary along the Georgian Trail; however, these are not considered “fill” as part of the current assessment. The ground area of the RSC Property did not contain significant vegetation growth, but this was determined to be due to the season (early spring) and the gravelly nature of the upper most soil. Historic images of the parcel captured through Google Street View for 2011, 2012, 2015, and 2018 display grass, shrub, or tree vegetation.

The evaluation completed by Azimuth in 2019 and 2021, had test pits advanced throughout the 150 and 160 King Street East parcels, with soil samples submitted to an accredited laboratory for analysis, (Caduceon Environmental Laboratories [Caduceon]). This exercise was completed for due diligence purposes to evaluate any potential contamination at the RSC Property and the 150 King Street East lands. The evaluation did not identify detections of metals or PHCs of any parameters above O.Reg. 153/04 MECP *Table 2 Full Depth Generic Site Condition Standards in a Potable Ground Water Condition for Residential/ Parkland/ Institutional Property Use* for coarse textured soils.

Based on the above discussion, the imported fill piles of unknown origin represent a significant PCA identified for the RSC Property.

7.2.2 Off-Site Activities

Table H (overleaf) represents the identified PCAs on, in, or under the Phase One Study Area (Figure 11). It is acknowledged that other items beyond those listed in O.Reg. 153/04 (Schedule D – Table 2) could be identified for the off-site PCAs.

Table H: Potentially Contaminating Activities – Phase One Study Area

ID	Potentially Contaminating Activity (O.Reg. 153/04 – Schedule D – Table 2)	Description of Activity	Information Source(s) (Section No.)
2	30. Importation of Fill Material of Unknown Quality	Small fill piles are noted at 35 Elgin Street North in the 1988 aerial photograph	Aerial Photographs (Section 4.7.1)
3	34. Metal Fabrication	Metal fabricator with ground water monitoring well installed on the property is located at 14 Elgin Street South	Site Reconnaissance (Section 6.0)
4	46. Rail Yards, Tracks and Spurs	The Georgian Trail was historically the Canadian National Railway since the 1800s	Aerial Photographs (Section 4.7.1)
5	57. Equipment Manufacturer	Rock breaking equipment manufacturing historically located at 35 Elgin Street North	Site Reconnaissance (Section 6.0)
6	NA Historic and current use of 90 King Street East	Historic use as apple processing plant since 1880s and current use for cider production	Site Reconnaissance (Section 6.0)
7	NA Diesel fuel spill	A spill of 400 L of diesel fuel at 99 King Street East in 2005	Environmental Source Information (Section 4.2)
8	NA Demolition waste storage at 90 King Street East	A demolition company was historically located at 90 King Street East	Environmental Source Information (Section 4.2)

Table H: Potentially Contaminating Activities – Phase One Study Area

ID	Potentially Contaminating Activity (O.Reg. 153/04 – Schedule D – Table 2)		Description of Activity	Information Source(s) (Section No.)
9	NA	Road salting practices along King Street East (Ontario Highway 26)	Road salt impacts consideration due to proximity	Site Reconnaissance (Section 6.0)

Breaker Technology Ltd. was established in 1961. Fill material was noted at 35 Elgin Street North in the 1988 aerial image. As noted above, fill can potentially introduce contamination to a Site, depending on its source zone land use. This parcel is also currently used for equipment manufacturing, and has been developed for use since circa 1961. This type of land activity has the potential to utilize bulk chemical products (gasoline, hydraulic oil, *etc.*). Information obtained through the EcoLog ERIS indicates that the company lists various waste classes including waste oils & lubricants, PCBs, petroleum distillates, and solvents since 1986². This land use is also listed as a former National Pollutant Release Inventory (NPRI) site in the EcoLog ERIS records; however, it was not present in the active NPRI database.

The southern extent of the manufacturing plant is ~35 m north of the RSC Property boundary and the fill storage denoted in 1988 is estimated to be offset ~25 m north of the Site boundary. Although the fill material and land use has the potential to introduce contamination into the area, there is no evidence of significant contamination at the Site (*i.e.*, vegetation impacts, *etc.*). In addition, the parcel is located down gradient from the RSC Property, and therefore any contamination would be expected to migrate away from the Site, toward Georgian Bay. Based on this assessment it was considered that the manufacturing operations have not adversely influenced the RSC Property.

The former CN railway was historically located immediately north of the RSC Property. This line was originally completed in 1872 and was formally abandoned in 1984. Railways are typically considered an environmental concern due to potential transport of bulk liquids, the soil sterilants historically sprayed along the rail corridor, and the chemical preservatives used to treat the wood used in rail construction (*i.e.*, rail ties). The Georgian Trail opened in 1989 and has been used for recreational purposes since this time. The adjacent historic CN railway is considered an APEC and an environmental concern to the RSC Property.

The 14 Elgin Street South parcel has been developed for use since sometime prior to 1973. This business was reportedly established in the 1960s and has been located at this location since its inception. The operational building is relatively small ~145 m². Information obtained through the Site Reconnaissance work (Section 6.0) indicates that bulk chemical products (*i.e.* solvents) have not been used in the past 12 years of operation. No bulk chemicals were noted during the Site Reconnaissance investigation; however, two (2) ground water environmental monitors were

² MECP Waste Generator records extend back to 1986.

identified along the north property boundary. The presence of a metal fabrication shop if involved in milling operations or similar has the potential to contaminate the soil and ground water with cutting fluids. The presence of environmental monitors suggests there could be a potential environmental concern related to past operations. No EcoLog ERIS spill records were identified for this property. The property is located ~175 m west of the RSC Property. It is felt that a significant release would be required to extend to the RSC Property and there was no evidence of such an event, therefore it is not considered significant environmental concern to the RSC Property.

The structure located at 90 King Street East was originally built in the 1880s and has historically been used as an apple processing facility; however, the structure was reportedly re-built in 1932 after a fire. It is understood that this facility was historically used to produce Mitchell's apple juice, apple cider and apple sauce. It is currently the home of the Thornbury Village Cidery. Information obtained through the EcoLog ERIS indicates that the Thornbury Village Cidery has generated waste oil and lubricants at this location since 2007. It is anticipated that this waste is generated by the equipment used in apple processing and cider packaging. An EcoLog ERIS record also lists this parcel as the location of San-Mar Environmental Group Ltd, a demolition company. This company generated wrecking and demolition waste between 1997 and 2001. Although the presence of this historical structure and current waste oil production has the potential to contaminate the soil and ground water, there is no evidence that any significant product release has occurred. The building envelope lies 250 m west of the RSC Property boundary. Any significant contamination would also flow tangential to the RSC Property, toward Georgian Bay. This land use is therefore not considered a significant environmental concern to the RSC Property.

Information obtained from the EcoLog ERIS report indicates that a 400 L diesel spill occurred at 99 King Street East in 2005. The fuel reportedly came from a transport truck, likely within the shopping plaza parking lot. The quantity of fuel released into the environment is significant; however the record listed the environmental impact as “not anticipated”. Although the quantity of material exposed to the environment is significant, any PHC contamination has likely degraded in the ~15 years since the incident. The location of the spill is also located tangential to the RSC Property, so any migration or transport to the RSC Property is considered low. This record is therefore not considered a significant environmental concern to the RSC Property.

Road salting practices along King Street East (Ontario Highway 26) suggest various types of salt impacts at the RSC Property. These anticipated impacts are not sourced directly from the Site and would be present from the perspective of preserving public safety. Therefore, salt impacts from road salting practices along King Street East (Ontario Highway 26) are deemed not to be an APEC to the RSC Property.

Based on the above discussion, none of the off-Site PCAs are considered a significant environmental concern to the RSC Property, barring the former CN rail corridor.

7.3 Areas of Potential Environmental Concern

The Phase One Environmental Site Assessment identified the following Areas of Potential Environmental Concern (APECs) at the Phase One Property and Phase One Study Area (see Figure 12 and Table I).

Table I: Potentially Contaminating Activities – RSC Property

Potentially Contaminating Activity (O.Reg. 153/04 – Schedule D – Table 2)		Description of Activity	Information Source(s) (Section No.)
On-Site			
30	Importation of Fill Material of Unknown Quality	Imported fill material of unknown quality was brought to the RSC Property at the time of the train stations decommissioning.	• Aerial Photography (Section 3.6.1) • Site Reconnaissance (Section 6.0)
Off-Site			
46	Rail Yards, Tracks and Spurs	Historical Canadian Pacific Railway Line is present the north of the RSC Property	• Environmental Source Information (Section 4.2) • Aerial Photography (Section 3.6.1) • Site Reconnaissance (Section 6.0)

Based on Section 7.0 there are two (2) *Areas of Potential Environmental Concern* (APECs) associated with the PCAs identified on the RSC Property and Phase One Study Area. These APECs are fill material of unknown quality noted at the RSC Property, and the historic Canadian National Rail (CNR) Line situated directly off-Site and to the north.

Areas of Potential Environmental Concern (APECs) and the contaminants of potential concern (COPCs) associated with these APECs are summarized on Table B.

7.4 Phase One Conceptual Site Model

As per Table 1 from Schedule D, Part VI of the Regulation, the Phase One Conceptual Site Model (CSM) is summarized as follows:

Currently the RSC Property is devoid of any structure and consists of undeveloped meadow and successional forest land. The historical aerial photography confirms the undeveloped nature of the RSC Property over time dating back to the 1938 images when the entire local area was undeveloped, barring the rail corridor.

The adjacent land uses appear to have remained principally agricultural in the distant past with residential redevelopment over time. The former CNR line immediately north of the RSC Property dates back to the 1870s. The rail corridor was formally abandoned in 1984; but had not

been used in decades. CNR had previously acquired an easement on the RSC Property; but it would appear that the easement was never used.

Over time, the King Street East corridor in the Site vicinity has been urbanized. The King Street East corridor has also been commercialized. According to the Town of The Blue Mountains Draft Zoning By-Law #2018-65, the RSC Property is zoned C1 – Village Commercial like the surrounding lands. The RSC Property lies within a mixed urban land use consisting of industrial, commercial, and residential property uses within the Village of Thornbury.

The RSC Property is bound by King Street East to the south, 150 King Street East to the west, the Georgian Trail to the north and municipally owned lands to the east and just west of Grey Street North. There are no access roads/ driveways onto the RSC Property.

According to local topographic mapping, the RSC Property is found at an approximate elevation of 188 m above mean sea level (masl). The parcel is gently sloped from south to north, toward Georgian Bay, located approximately 200 m north of the RSC Property. Given the granular sediments, precipitation would percolate into the underlying soils at the Site. If excess water existed then it would either be directed to the roadside swale or the ditching along the former railway corridor. The shallow soils beneath the RSC Property consist of sandy to silty material. Within a metre or two of the ground surface, the soils transition into a sandy silt till which may exist to the shale bedrock contact.

The surficial soils at the RSC Property are classified as Brighton sand (Hoffman *et al*, 1962). This soil is a well sorted sandy outwash material with good drainage. Brighton sand is classified within hydrologic soil group “A”. Group A soils have low runoff potential and high infiltration rates even when thoroughly wet, and consist of deep, well to excessively drained sand or gravel.

The RSC Property is located within the Beaver Valley Physiographic Region of Ontario (Chapman & Putnam, 1984). The Beaver Valley is a small but well defined area between Griersville Rock to the west and the Blue Mountains Peaks to the east. The area was eroded by a pre-glacial river into Georgian Bay, which carved a deep valley into the subsurface. According to Barnett *et al* (1991) the surficial material at the RSC Property consists of glaciolacustrine deposits composed of sand, gravelly sand, and gravel associated with near shore and beach deposits, minor tills and includes esker, kame, end moraine, ice-marginal delta and subaqueous fan deposits.

Based on a review of the MECP well records, the depth to ground water in the vicinity of the Phase One Property varies from 1.5 to 4.5 mbgs. On-Site monitoring wells measured a potentiometric water level between 0.1 and 2.7 mbgs. The variation in the ground water level may be due in part to subtleties in the ground surface. Depositional variations were apparent and lower permeability seams may locally "perch" water entering the shallow overburden sediments.

The shallow ground water flow direction within the Phase One Study Area is inferred to be north towards Georgian Bay. The Site is situated within a beaches and sand plains physiographic region. The surficial geology in the vicinity of the Site is described as “coarse-textured” lacustrine deposits consisting of sand, gravel, minor silt and clay.

The underlying bedrock within the area is reported to be shale (Section 4.7.7). The depth to bedrock is significantly deeper than that seen away from the Beaver Valley. Bedrock along Highway 26 from Thornbury to Collingwood is generally considered to be <10 m depth. The increased depth to the bedrock is considered part of the Beaver Valley genesis being a pre-glacial river erosion event which carved a deep valley into the subsurface. The erosion is anticipated to have included the underlying bedrock. As noted in the water well records, the depth to bedrock in wells within the Phase One Study Area is 27 to 34 mbgs. The nearest bedrock well (WWR No.: 25-02573) is located approximately 55 m south. According to this well record, the bedrock contact occurs at about 27.4 mbgs.

The underlying bedrock geology has been described by the Ontario Geologic Survey (OGS) as the Blue Mountain Formation. The Georgian Bay Formation overlies the Blue Mountain Formation; but is reported to exist south of Highway 26, (Armstrong and Dodge, 2007). The Blue Mountain Formation is Upper Ordovician in age and is described as a shale with minor limestone present.

One PCA has been identified on, in the RSC Property (Table G). Other PCAs have been identified in the Phase One Study Area (Table H). Two PCAs identified are considered to be APECs (Table B). Based on this finding, a Phase Two ESA is required before an RSC can be submitted. It is recommended that the APECs be analyzed for the *Contaminants of Potential Concern* (PCOC) listed in the Table B.

This assessment relied heavily on indirect evidence, such as historic records, visual Site inspection, and the interview process. Notwithstanding, it is important to recognize that some components in the evaluation are considered subjective in nature and may not carry the same level of significance, which in some cases may be subject to additional consideration.

7.5 Uncertainty or Absence of Information

All aspects of Phase One ESA were conducted consistent with O.Reg. 153/04, and as such the RSC Property was investigated thoroughly to the best of our abilities. As access to the entire Site was possible and adequate historical information was available through the record review, it is our opinion that the uncertainty or absence of information is not expected.

8.0 CONCLUSIONS

The Phase One RSC ESA identified one PCA on the RSC Property and seven PCAs within the Phase One Study Area. Based on the information reviewed as part of the current assessment, the historic CN rail line is considered a significant off-Site PCA and therefore presents as an APEC toward the RSC Property. The imported fill present on the RSC Property is also considered a PCA and therefore is deemed to be an APEC.

Based upon the information provided above, a Phase Two ESA will be required to be conducted prior to filling an RSC. The Phase Two ESA shall be carried out to determine the absence or presence of the actual contamination for the APECs identified at the RSC Property.

9.0 LIMITATIONS AND USE OF THIS REPORT

This report has been prepared for the sole benefit of Thornbury Hills Limited, represented by Charanjit Aneja (the 'Client'). Azimuth Environmental Consulting, Inc. (the 'Consultant') understands that this report may be provided to and relied upon by others. Any other person or entity without the express written consent of the Consultant and the Client may not rely upon the report. Any use that a party makes of this report, or any reliance on decisions made based on it, is the responsibility of such parties. The Consultant accepts no responsibility for damages, if any, suffered by any party as a result of decisions made or actions based on this report.

The information and conclusions contained in this report are based upon work undertaken by trained professional and technical staff in accordance with generally accepted engineering and scientific practices current at the time the work was performed. This report should in no way be construed as a definitive representation of any or all environmental impacts on the site resulting from past or current practices. The information contained within this report should be evaluated, interpreted, and implemented only in light of this assignment.

The Consultant makes no other representation whatsoever, including those concerning the legal significance of its findings, or as to the other legal matters addressed incidentally in this report, including but not limited to the application of any law to the facts set forth herein. With respect to regulatory compliance issues, regulatory statutes are subject to interpretation. These interpretations may change over time, thus the Client should review such issues with appropriate legal counsel.

Re: **Phase I Environmental Site Assessment**
150 King Street, Town of The Blue Mountains, ON

Dear Mr. Toor:

Azimuth Environmental Consulting, Inc. (Azimuth) is pleased to provide you with the following report documenting the Phase I Environmental Site Assessment (ESA) conducted at 150 King Street within the Town of The Blue Mountains, Ontario (the "Phase I Property").

This assessment was conducted to evaluate potential environmental concerns on the Phase I Property associated with past and present site activities, as well as adjacent land use(s) in accordance with the Canadian Standards Association (CSA), Standard Z768-01.

The Phase I ESA did not identify any "*areas of potential environmental concern* (APEC)" associated with the Phase I Property. Based on the results of the field program, no additional work is recommended at this time.

We trust this report is sufficient for your current requirements and would like to thank you for the opportunity to work with you on this project. Please do not hesitate to contact us if you have any questions.

Yours truly,

AZIMUTH ENVIRONMENTALCONSULTING, INC.

Jennifer Thompson, M.A.Sc., P.Geo.

1.0 EXECUTIVE SUMMARY

Azimuth Environmental Consulting, Inc. (Azimuth) conducted a Phase I Environmental Site Assessment (ESA) for the property located at 150 King Street East in the Town of Blue Mountains, Ontario. The Phase I Property is rectangular in shape, approximately 0.8 hectares (ha) in size, and is bound by King Street East to the southwest, Elgin Street North to the northwest, and the Georgian Trail to the northeast. The property identification number (PIN) of the Phase I Property is 3714-10090.

The Phase I Property is currently undeveloped meadow and forest land. According to the Town of The Blue Mountains Draft Zoning By-Law #2018-65, the Phase I Property is zoned C1 – Village Commercial. The directive of this assessment is to determine the actual historic use of the Phase I Property, and whether any structures have been constructed within the parcel over the period of assessment. The assessment will also evaluate potential environmental concerns of the Phase I Property, associated with past and present site activities, as well as adjacent land uses.

The Phase I Property is found at an approximate elevation of 190 masl. The parcel is gently sloped from southwest to northeast, toward Georgian Bay. Runoff from the Site is expected to follow the local topographic grade as sheet flow. The subsurface beneath the Phase I Property consists of sandy clay material over sand and shale bedrock.

Information obtained through the current assessment suggests that the Phase I Property has not historically been used (i.e. no structure has been developed upon the land). The CNR line immediately north of the Phase I Property previously utilized an easement on the parcel; however no structures were noted as part of the current assessment. The Phase I Property is undeveloped land in the 1938, 1954, 1962, 1973, 1988, and 2010 aerial images.

The Phase I ESA identified one PCA for the Phase I Property and seven PCAs for the Phase I Study Area. Based on the information reviewed as part of the current assessment, none of the identified PCAs are considered significant, and therefore no APECs have been identified for the Phase I Property.

Based upon the information provided above, no additional work is recommended for the Phase I Property.

2.0 INTRODUCTION

2.1 Phase I Property Information

Azimuth Environmental Consulting, Inc. (Azimuth) has been retained by Hamraz Toor C/O Pascuzzo Planning Inc. to conduct a Phase I Environmental Site Assessment (ESA) for the parcel located at 150 King Street East in the Town of Blue Mountains, Ontario (the “Phase I Property”)(Appendix A - Figure 1).

The Phase I Property is rectangular in shape, approximately 0.8 hectares (ha) in size, and is bound by King Street East to the southwest, Elgin Street North to the northwest, and the Georgian Trail to the northeast. The property identification number (PIN) of the Phase I Property is 3714-10090.

The Phase I Property is currently undeveloped meadow and forest land. According to the Town of The Blue Mountains Draft Zoning By-Law #2018-65, the Phase I Property is zoned C1 – Village Commercial. The directive of this assessment is to determine the actual historic use of the Phase I Property, and whether any structures have been constructed within the parcel over the period of assessment. The assessment will also evaluate potential environmental concerns of the Phase I Property, associated with past and present site activities, as well as adjacent land uses.

2.2 Contact Information

The representative for the current owner of the Phase I Property is Dan Halos of Royal LePage Trinity. Mr. Halos is the sales representative for the parcel, and his father is the current owner. Contact information for Mr. Halos is provided in Appendix B.

3.0 SCOPE OF INVESTIGATION

This site evaluation follows traditional studies where information regarding the Phase I Property is collected and evaluation. Canadian Standards Association (CSA) Z768-01 Phase I ESA stipulated the minimum requirements necessary for such a study. The four principal components of a Phase I ESA are:

- A record review;
- An interview process;
- A site reconnaissance visit; and
- Evaluation of information and reporting.

4.0 RECORDS REVIEW

The purpose of the review of historical records is to obtain information on the current and past uses of the Phase I Property and Phase I Study Area and to identify activities at or in the vicinity of the Phase I Property that could create a potential environmental concern.

4.1 General

4.1.1 Phase I Study Area Determination

The “Phase I Study Area” includes all properties located wholly or partially within 250 m of the nearest point on the boundary of the Phase I Property (Figure 3). Our evaluation did not identify any properties (in whole or in part) that were situated beyond 250 m of the Phase I Property boundary that warranted consideration. The properties within the Phase I Study Area and their current uses are listed in Table 1.

Table 1: Phase I Study Area Land Use

Address/ Parcel Block Name	Current Use
108 Arthur Street East	Crown Storage Corp.
3 Grey Street North	Blue Mountain Chamber of Commerce
5 Grey Street North	SOS Storage on Site
6 Elgin Street	Carquest Thornbury
14 Elgin Street	Thornbury Steel Fabricators
35 Elgin Street	Breaker Technology Ltd.
21 King Street East	Tigs Store
75 King Street East	Thornbury Veterinary Hospital
78 King Street East	The Blue Mountains Community Health Centre
81 King Street East	The Orchid Restaurant
87 King Street East	Undeveloped gravel lot
90 King Street East	Thornbury Village Cidery
99 King Street East	Kings Court Shopping Centre with the following tenants: • Cedarport Window and Door Centre • Shelter Interior Design • Kingpost Builders • Floor Crafters • Ashtons • Thornbury Antique Market • Ashanti Coffee • Calen Ireland School of Dance • Corinthain Kitchens • Mullins Pet Market • Niagara Escarpment Commission
115 King Street East	Thornbury Dental
125 King Street East	Vacant lot with driveway and electrical meter (former Oakley's Field Fresh farm stand)
131 King Street East	Single lot residential
135 King Street East	Promotions Custom Casuals and Embroidery
137 King Street East	Single lot residential

141 King Street East	Penny's Motel
151 King Street East	City Stone
161 King Street East	Beaver Motel
171 King Street East	Vacant building – former IGA grocery store
199 King Street East	Steve's Restaurant (closed)
Huron Street East Residences	Single lot residential
McAuley Street Residences	Single lot residential
Louisa Street East Residences	Single lot residential
Arthur Street East Residences	Single lot residential
Bay Street East Residences	Single lot residential
PIN 371410085	Georgian Trail
PIN 371410091	Vacant land (same owner as the Phase I Property)
PIN 371410089	Georgian Trail
PIN 371400173	Vacant forested lot
PIN 371400204	Bayview Park

Notes Uses in **Red** and **Bold** are those activities typically considered to be Potential Contaminating Activities (PCAs) (the actually PCAs to be identified for this Phase I Property could be less due to the separation distance and orientation relative to the Phase I ESA [i.e., down gradient location to the Phase I ESA])

4.1.2 Fire Insurance Plans

An online search of the Catalogue of Canadian Fire Insurance Plans (FIP) for 1875-1975 contained one record for Thornbury Ontario for 1890. The record does not include a detailed map of the Phase I Study Area, however the key plan identifies the Phase I Property and surrounding area in relation to the downtown area to the west. The key plan indicates the presence of the existing road network and the Grand Truck Railway along the current Georgian Trail alignment. The key plan identifies the land between King Street, Huron Street, Elgin Street, and Mill Street as Station Grounds, and identifies a station structure in the southeast corner of the grounds. This station would be in the vicinity of 90 King Street East. The key plan also indicates "S.W.D." which is assumed to mean "scattered with dwellings" in the blocks between Mill Pond, King Street, Wellington Street, and Arthur Street. This area correlates with a historic residential area in vicinity to the Phase I Property. No structures are identified within the Phase I Property.

4.1.3 Chain of Title

An electronic chain of title search was conducted for the Phase I Property through EcoLog ERIS. According to the chain of title, the parcel was transferred from Jeffrey Charles Smith to Clarksburg Realty Corp. in 2016. The Canadian National Railway Company also released an easement on the property to the Clarksburg Realty Corp. in 2019. The complete chain of title is included in Appendix C.

4.1.4 Environmental Reports

No environmental reports were provided by the client for review.

4.1.5 First Developed Use Determination

Information obtained through the current assessment suggests that the Phase I Property has not historically been used (i.e. no structure has been developed upon the land). The CNR line immediately north of the Phase I Property previously utilized an easement on the parcel; however no structures have been noted as part of the current assessment. The Phase I Property is undeveloped land in the 1938, 1954, 1962, 1973, 1988, and 2010 aerial photographs reviewed as part of Section 4.7.1.

4.2 Environmental Source Information

An EcoLog ERIS database search was conducted for the Phase I Property and a report was prepared and dated March 28, 2019 (Appendix D). The EcoLog ERIS search evaluated the Phase I Property including a 0.25 km buffer for records in over 70 federal and provincial environmental databases.

4.2.1 Phase I Property Records

According to the EcoLog ERIS, there are no records identified for the Phase I Property.

4.2.2 Phase I Study Area Records

Thirty-nine (39) Phase I Study Area records were identified in the EcoLog ERIS search. The Phase I Study Area records of interest include:

- Two (2) Certificate of Approval records:
 - o One (1) record for Breaker Technology Ltd. at 35 Elgin Street for approved air emissions in 2006;
 - o One (1) record for Thornbury Castle Inc. at 90 King Street East for approved industrial air in 1988. This business is listed as a microbrewery;

Air emissions are not considered a significant environmental concern to the Phase I Property.

Air emissions are not considered a significant environmental concern to the Phase I Property.

- One (1) Environmental Activity and Sector Registry record for Breaker Technology Ltd at 35 Elgin Street for a heating system in 2014;

This record is not considered a significant environmental concern.

- Five (5) Environmental Registry records:
 - o Three (3) records for Breaker Technology Ltd. at 35 Elgin Street for the discharge of air and sewage emissions;
 - o Two (2) records for Ashanti Coffee Estate at 99 King Street East for the discharge of air emissions;

These records are not considered a significant environmental concern to the Phase I Property.

- Four (4) Environmental Compliance Approval records
 - o Two (2) records for Breaker Technology Ltd. at 35 Elgin Street for the discharge of air/noise emissions
 - o Two (2) records for Ashanti Coffee Estate at 99 King Street East for the discharge of air/noise emissions

These records are not considered a significant environmental concern to the Phase I Property.

- Five (5) ERIS Historical search records

These records represent historical due diligence report searches and do not represent a significant environmental concern to the Phase I Property.

- Thirteen (13) Ontario Regulation 347 Waste generator Summary records:
 - o Eleven (11) records for Teledyne Canada / Breaker Technology Ltd. at 35 Elgin Street. The company is listed as a maker of construction equipment, and lists various waste classes including waste oils & lubricants, PCBs, petroleum distillates, and solvents. The record was active between 1986 – present;

The current land use at 35 Elgin Street is considered a PCA and is further discussed in Section 6.4.

- o One (1) record for Thornbury Village Cidery Inc. at 90 King Street East for waste oils and lubricants since 2007

The storage of waste oil is considered a PCA and is further discussed in Section 6.4.

- o One (1) record for San-Mar Environmental Group Ltd. at 90 King Street East for generation of various waste classes under wrecking and demo operations between 1997 - 2001;

The storage of waste oil is considered a PCA and is further discussed in Section 6.4.

- One (1) National Pollutant Release Inventory record for Breaker Technology Ltd. at 35 Elgin Street for the operation of a industrial machine manufacturing facility;

The land use at 35 Elgin Street is considered a significant environmental concern and is further discussed in Section 6.4.

- Four (4) Scott's Manufacturing records
 - o Two (2) records for Breaker Technology Ltd. at 35 Elgin Street for the manufacture of construction and mining equipment established in 1961;
 - o Two (2) records for Thornbury Steel Fabricators at 14 Elgin Street South for metal product manufacturing since 2004;

The above two land uses are considered a PCA and are further discussed in Section 6.4.

- One (1) Ontario Spill record for Roseman Transport Ltd. for 400L of diesel fuel to the parking lot at 99 King Street East in 2005. The spill was from a transport truck;

This spill is considered a significant volume in proximity to the Phase I Property. It is therefore considered a PCA and is further discussed in Section 6.4.

- Three (3) Water Well Information System records

These records will be further discussed in Section 4.7.7.

4.2.3 Unplottable Phase I Study Area Records

In addition to the 39 Phase I Study Area records, fifty-eight (58) records were identified within the Phase I Study Area which are classified as “unplottable”. The below record was considered relevant to the current Phase I ESA:

- One (1) Compliance and Conviction record for San-Mar Environmental Group on 1999 for the operation of a waste management system without approval, and having demolition waste on site without approval;

4.3 Brownfields Environmental Site Registry

A search was performed of the “Brownfields Environmental Site Registry” operated by the MECP (<http://www.environet.ene.gov.on.ca/besr-public/generalSearch.do?action=display&>). This on-line registry was developed to record all site remediation work being filed under the Environmental Protection Act (Record of Site Condition O. Reg. 153/04 [as amended]). The search revealed two (2) records for the Municipality of The Blue Mountains, one of which was located within the Phase I Study Area at 53, 63, and 69 King Street East. Based on the information provided, the parcels were previously part of a former UPI bulk petroleum plant, and a Phase I and Phase II ESA was prepared for the RSC submission.

A search was also performed on the more recent “Records of Site Condition” database operated by the MECP (<http://www.ontario.ca/environment-and-energy/records-site-condition>). This on-line registry listed two (2) records for the Municipality of The Town of Blue Mountains, however none of the records were located within the Phase I Study Area.

4.4 National Pollutant Release Inventory

The on-line National Pollutant Release Inventory (NPRI) (<http://www.ec.gc.ca/inrp-npri/>) was reviewed and no NPRI sites were identified in the Phase I Study Area or within 10 kilometers of the Thornbury Area. It should be noted that an NPRI listing for 35 Elgin Street was identified as part of the EcoLog ERIS search.

4.5 MECP Records/FOI Search

A Freedom of Information (FOI) request has been submitted to the MECP for the Phase I Property. No response had been received to this request at the time of report finalization. Any FOI information that is received will be provided to the client as an addendum to this report.

4.6 City Directory

A city directory search was completed through EcoLog ERIS. The results of the report indicate that no city directory records are available for the Municipality of Thornbury of The Blue Mountains. The complete record can be found in Appendix E.

4.7 Physical Setting Sources

4.7.1 Aerial Photographs

A summary of the aerial photographs can be found in Table 2.

Table 2: Summary of Air Photo Analysis

Year	Subject Property Land Use	Surrounding Area
1938 Figure 4	The Phase I Property appears to be composed of undeveloped meadow and forest land;	- King Street East, Wellington Street South, Louisa Street East, McAuley Street South, Elgin Street South, and the CPR line are present; - Residential homes are present along Elgin Street South, McAuley Street South, and Wellington Street South; - Structures are present at 21, 78, 90, 115 King Street East, PIN 378880000, and along the south side of King Street East; - Surrounding land use is composed of undeveloped forest or meadow land; - Some land to the south of Louisa Street East appears to be used as an orchard;
1954 Figure 5	No significant changes to the Phase I Property;	- Structures are present at 99 King Street East; - Bay Street East and Huron Street East are present; - The structure previous noted at 78 King Street is no longer present;
1962 Figure 6	No significant changes to the Phase I Property;	- Arthur Street East is now present; - A structure is present within 35 Elgin Street - A structure is present within 161 King Street East; - Additional structures are now present on the north side of Arthur Street, west of the Elgin Street intersection; - The structure at 108 Arthur Street East is now present; - A structure is noted in the northeast corner of 90 King Street East in proximity to the “station” noted in the first insurance plans in Section 4.1.2; - Additional residential homes are now present along Bay Street East;
1973 Figure 7	No significant changes to the Phase I Property;	The structure footprint within 35 Elgin Street has expanded;

Table 2: Summary of Air Photo Analysis

Year	Subject Property Land Use	Surrounding Area
Figure 7		• There are additional structures/homes along the south side of King Street East; • Additional land near the Wellington Street South and the Arthur Street East intersection is being used for orchard agricultural production; • Disturbed land and a driveway is present within 125 King Street East • The structure within 14 Elgin Street is now present;
1988 Figure 8	• No significant changes to the Phase I Property; • Small fill piles may be present across the parcel;	• Arthur Street now extends east, past the Elgin Street intersection. Residential homes are present on the north and south sides of the extension; • Additional expansions to the 35 Elgin Street structure are noted. The parcel is now accessible from Grey Street North on the east side of the parcel. Some miscellaneous product storage is apparent along the Grey Street North access road; • The motel is now present at 141 King Street East; • There is a extension on the south side of the CNR line connecting lots on the north side of King Street East with rail loading / unloading access; • A pump island is noted at 63 King Street East; • The “station” building previously noted at 90 King Street East is no longer present; • Some fill piles are noted along the south side of the Grey Street North entrance to the 35 Elgin Street parcel; • A structure is present within the 5 Grey Street North and 199 King Street East parcels
2010 Figure 9	• No significant changes to the Phase I Property; • Rock boulders are noted along the east parcel boundary along the Georgian Trail; • Some bare soil is noted along Elgin Street in the northwest area of the Site;	• The Georgian Trail is present; • The 6 Elgin Street parcel has been cleared and graded and is composed of bare soil; • The western half of the 90 King Street East structure has been removed. The surrounding area is composed of bare ground; • The self storage is now present at 5 Grey Street North; • The existing structure is now present at 3 Grey Street North; • The grocery store is present at 171 King Street East; • There are no structures present at 125 King Street North. The parcel has a paved driveway and an area of sparse vegetation where a former structure may have been;

4.7.2 Physiography

The Phase I Property is located within the Beaver Valley Physiographic Region of Ontario (Chapman & Putnam, 1984). The Beaver Valley is a small but well defined area between Griersville Rock to the west and the Blue Mountains Peaks to the east. The area was eroded by a pre glacial river into Georgian Bay, which carved a deep valley into the subsurface.

4.7.3 Topography and Drainage

The Phase I Property is found at an approximate elevation of 190 masl. The parcel is gently sloped from southwest to northeast, toward Georgian Bay. Runoff from the Site is expected to follow the local topographic grade as sheet flow.

The soils at the Phase I Property are classified as Brighton sand (Hoffman *et al.*, 1962). This soil is a well sorted sandy outwash material with good drainage. Brighton sand is classified within hydrologic soil group “A”. Group A soils have low runoff potential and high infiltration rates even when thoroughly wet, and consist of deep, well to excessively drained sand or gravel.

4.7.4 Quaternary Geology

According to Barnett *et al.* (1991) the surficial material at the Phase I Property consists of glaciolacustrine deposits composed of sand, gravelly sand, and gravel associated with near shore and beach deposits.

4.7.5 Bedrock Geology

The underlying bedrock geology has been described by the Ontario Geologic Survey (OGS) as being composed of shale and minor limestone of the Blue Mountain Formation (OGS, 2016). The Blue Mountain Formation is Upper Ordovician in age. The bedrock is found at a depth of approximately 15 to 30 mbgs.

4.7.6 Fill Materials

Some evidence of fill material was noted in the 1988 aerial image. The images shows small discrete patches of disturbed land and /or fill piles primarily in the south eastern half of the parcel. No significant fill piles were noted at the parcel during the site visit. Boulders were noted along the northeast parcel boundary along the Georgian Trail, however these are not considered “fill” as part of the current assessment. The ground area of the Phase I Property did not contain significant vegetation growth, but this was determined to be due to the season (early spring) and the gravelly nature of the upper

most soil. Historic images of the parcel captured through Google Street View for 2011, 2012, 2015, and 2018 display grass, shrub, or tree vegetation.

4.7.7 Well Records

The Ontario Ministry of Environment, Conservation and Parks (MECP) Water Well Records (Appendix F) were referenced for any recorded well information within the vicinity (~250 m) of the centre of the Phase I Property (Table 3). The Phase I Study Area is currently serviced with municipal water. Water Well Records can be used to gain subsurface information which can provide insight into geological formations within the area.

Table 3: Water Well Database Summary¹

Well ID	Direction from Phase I Property	Distance from centre of Phase I Property (m)	Elevation (masl)	Date Drilled	Static Water Level (mbgs)	Total Depth (m)	Well Type	Primary Use
2502573	W	86	189	01-DEC-61	-	27.4	Bedrock	Abandoned
7262531	NW	145	188	26-APR-16	-	-	-	-
2502574	SSW	248	196	20-DEC-67	-	34.1	Bedrock	Domestic

Notes: ¹ - values rounded for presentation purposes

Only three wells were located within 250m of the Phase I Property. One of the wells was drilled for a domestic supply, one of the wells was abandoned due to lack of water supply, and one record did not contain information related to the well use or construction. The two well records with information were 27.4 and 34.1 m deep, both bedrock wells, and encountered shale bedrock at a depth of 16.7 and 28.9 mbgs. Both well records indicated the presence of sandy clay at the surface. Beneath the clay, one record encountered sand over the shale. The second record encountered various layers of diamicton, gravel, and additional clay over the shale bedrock. Ground water flow in the vicinity of the Phase I EAS is anticipated to be north toward Georgian Bay.

4.8 Site Operating Records

4.8.1 Inventory of Storage Tanks

No storage tanks are located at the Phase I Property. This is anticipated due to the undeveloped nature of the parcel.

4.8.2 Underground Utility Drawings

A public locate request was not completed for the Phase I Property. According to information from the Interview (Section 5.0) natural gas, water, and sewer services are available in the Phase I Study Area but these lines do not enter the Phase I Property.

4.8.3 Waste Disposal Records

No waste disposal records are available for the Phase I Property. This is anticipated due to the undeveloped nature of the parcel.

5.0 INTERVIEWS

An interview was conducted with Dan Halos of Royal LePage Trinity. Mr. Halos is representing both the buyer and seller in the real estate transaction, and is also the son of the current owner of the Phase I Property. The interview was completed over the phone between 9:00am – 9:30am on April 5, 2019. The following points summarize the key information derived from these interviews (in no particular order of importance):

- The Phase I Property was purchased in 2016. The Phase I Property has not been used over the period of ownership;
- Mr. Halos is not aware of any previous use or development of the Phase I Property;
- The owner of the Phase I Property also owns the adjacent parcel to the southeast, between King Street East, the Georgian Trail, and Grey Street North (PIN 371410091);
- Mr. Halos is not aware of any fill being brought to the Phase I Property;
- Mr. Halos is not aware of any historic well or septic systems present at the Phase I Property. There is currently municipal gas, water, and sewer available to the Phase I Property however these services do not enter the parcel;
- Mr. Halos is not aware of any environmental issues at the Phase I Property or within the Phase I Study Area;

No other relevant environmental information was provided for the Phase I Property.

6.0 SITE RECONNAISSANCE

6.1 General Requirements

A Site reconnaissance visit was conducted in on April 3, 2019 between the hours of 9:00 am and 11:00 am by Ms. Jennifer Thompson of Azimuth. This site reconnaissance included a visual inspection of the ground surface of the Phase I Property and a visual inspection of adjacent properties from the road surface. The following section is a summary of information relating to potential areas of environmental concern.

6.2 Observations at Phase I Property

6.2.1 General Observations and Site Layout

The Phase I Property is bound by King Street E to the southwest, Elgin Street N to the northwest, the Georgian Trail to the northeast, and an unopened road alignment of Wellington Street S to the southeast. There are no driveways within the Phase I Property. The Site does not contain any structures, and the land is composed of overgrown grass, shrubs, and trees.

6.2.2 Site Infrastructure

There are no structures at the Phase I Property. No evidence of historical infrastructure (wells, septic, building foundations, driveways) was noted at the Phase I Property.

6.2.3 Site Servicing

The Phase I Study Area is serviced with municipal water, municipal sewer, and gas. Overhead hydro lines are present on the north and south sides of King Street East.

6.2.4 Exterior Activities and Observations

The exterior land at the Phase I Property is composed of overgrown grass, bare ground, shrubs, and tree vegetation. There are no structures present at the Phase I Property. One sign was present at the Site, advertising the Phase I Property for sale by Dan Halos of Royal LePage.

Ponded water was present in the low lying areas in the northwest end of the parcel and along the boundary with the Georgian trail. About 10cm of snow was also present in some areas of the Phase I Property.

Two wooden stakes with flag markers were located along King Street East within the Phase I Property. The markers located a metal control survey in the ground. This marker is used as a benchmark for topographic surveys.

One area within the trees there was remnants of a fire and camp site. The area contains some miscellaneous household garbage.

The boundary between the Phase I Property and the Georgian Trail contained a number of large boulders (20-50 cm in diameter). A pile of wood logs were present on or immediately southeast of the Phase I Property within a treed area.

No significant ground staining was noted across the Phase I Property. Although much of the site contains a mixture of bare earth and dead grass, this was likely representative of the season (early spring) and not due to significant surficial contamination at the Phase I Property.

6.2.5 Designated Substance Survey of the Phase I Property

A designated substance survey (DSS) was not completed for the Phase I Property. There are no structures present at the Phase I Property, so the risk of DSS is very low.

6.3 Phase I Study Area Investigation

The Phase I Property lies within an industrial, commercial, and residential area of the Town of Blue Mountains (Figure 3). The current land uses within the Phase I Study Area can be found in Table 1. A visual inspection was completed for each parcel from the road.

Land to the north of the Phase I Property is composed of the Georgian Trail, single lot residential homes, Bayview Park, and Breaker Technology Limited at 35 Elgin Street North. Breaker Technology Limited is a manufacture of mine, quarry, and construction demolition equipment. The parcel is accessible from Elgin Street North and Grey Street North (truck entrance). The parcel contains numerous steel storage bins, parked trucks, parked cars (assumed to be employee parking). No significant product storage or signs of large scale contamination (i.e. monitoring wells) was noted. A call was made to Breaker Technology on April 17th 2019 however no response was received.

Land to the northwest is composed of the Thornbury Village Cidery at 90 King Street East. This building is a large brick building with associated patio and parking area. The building appears to be in use for cider production. This building was reportedly built in the mid 1880s and then rebuilt in 1932 after a fire. The building was rebuilt by John Mitchell of Mitchell Brand Apple Products and was used as an apple processing facility.

Land further northwest is composed of the Blue Mountains Community Health Centre (78 King Street), Tigs Store (21 King Street East), The Orchid Restaurant (81 King Street East) and undeveloped gravel lot utilized as a parking lot (87 King Street East). A car parts retail store is located at 6 Elgin Street, and a cold storage facility is located at 108 Arthur Street. The car parts store did not contain any garage doors or appear to offer automotive services. The land around the cold storage building contains a number of wood pallets stored against the structure.

Land to the west of the Phase I Property is composed of Thornbury Dental (115 King Street East), and the Kings Court Shopping Centre (99 King Street East). The shopping centre has various tenants, including a number of home improvement / building stores, a school of dance, pet store, and coffee shop.

Land to the south of the Phase I Property is composed of single lot residential homes, a motel (141 King Street East), a counter top retail store (151 King Street East), and a custom embroidery retail store (135 King Street East). There is a vacant lot at 125 King Street East that contains a driveway, gravel areas, and what appears to be an electrical meter. A historic image of the parcel captured through Google Street View in October of 2012 show the presence of a large tent and produce market. A sign in the front lawn indicates it is Oakley's Field Fresh farm stand. Land further south contains a metal fabricator shop at 14 Elgin Street South. A call to the business indicated that they had been in operation since the 1960s and have always been at the current location. The individual who answered the phone indicated that no bulk chemicals (i.e. solvents) had been used over the past 12 years of his employment. The employee indicated that the parcel was serviced with municipal water and sewage, and he was not aware of any environmental issues in the vicinity of the site.

Land to the southeast is composed of a second motel (161 King Street East) a vacant grocery store (171 King Street East), a vacant restaurant (199 King Street East), a self storage facility (5 Grey Street North), and the Blue Mountain Chamber of Commerce (3 Grey Street North). Additional land to the east is composed of single lot residential homes along Bay Street East.

6.4 Potentially Contaminating Activity

6.4.1 On-Site Activities

Table 4 represents the identified PCAs on, in, or under the Phase I Property. It is acknowledged that other items beyond those listed in O. Reg. 153/04 (Schedule D – Table 2) could be identified for as PCAs.

Table 4: Potentially Contaminating Activities – Phase I Property

Potentially Contaminating Activity (O.Reg. 153/04 – Schedule D – Table 2)		Description of Activity	Information Source(s) (Section No.)
30.	Importation of Fill Material of Unknown Quality	Small fill piles are noted on the 1988 aerial photograph	• Aerial Photographs (Section 4.7.1)

The Phase I Property is currently composed of undeveloped grass and shrub land. In the 1988 aerial image, small fill piles and / or areas of disturbed ground were noted,

particularly in the southeast half of the parcel. The transfer of fill material is considered a PCA (PCA No.: 30) when the quality of the material is unknown. This is due to the potential that the fill material was contaminated in its original location, and this contamination could then be spread to the Phase I Property after placement. During the site visit, no elevated mounds of material were visible. As noted above, boulders were noted along the northeast parcel boundary along the Georgian Trail, however these are not considered “fill” as part of the current assessment. The ground area of the Phase I Property did not contain significant vegetation growth, but this was determined to be due to the season (early spring) and the gravelly nature of the upper most soil. Historic images of the parcel captured through Google Street View for 2011, 2012, 2015, and 2018 display grass, shrub, or tree vegetation. Due to the lack of notable fill piles, and historic vegetation growth at the Site over time, the potential fill piles noted in the 1988 aerial image are not considered a significant environmental concern to the Phase I Property.

Based on the above discussion, there are no significant PCAs identified for the Phase I Property.

6.4.2 Off-Site Activities

Table 5 represents the identified PCAs on, in, or under the Phase I Study Area. It is acknowledged that other items beyond those listed in O.Reg. 153/04 (Schedule D – Table 2) could be identified for the off-site PCAs.

Table 5: Potentially Contaminating Activities – Phase I Study Area

Potentially Contaminating Activity (O.Reg. 153/04 – Schedule D – Table 2)		Description of Activity	Information Source(s) (Section No.)
30.	Importation of Fill Material of Unknown Quality	Small fill piles are noted at 35 Elgin Street in the 1988 aerial photograph	• Aerial Photographs (Section 4.7.1)
34.	Metal Fabrication	Metal fabricator located at 14 Elgin Street North	• Site Reconnaissance (Section Error! Reference source not found.)
46.	Rail Yards, Tracks and Spurs	The Georgian Trail was historically the Canadian National Railway since the 1800s	• Aerial Photographs (Section 4.7.1)

Table 5: Potentially Contaminating Activities – Phase I Study Area

Potentially Contaminating Activity (O.Reg. 153/04 – Schedule D – Table 2)		Description of Activity	Information Source(s) (Section No.)
NA	Equipment Manufacturer	Rock breaking equipment manufacturing historically located at 35 Elgin Street North	• Site Reconnaissance (Section Error! Reference source not found.)
NA	Historic and current use of 90 King Street East	Historic use as apple processing plant since 1880s and current use for cider production	• Site Reconnaissance (Section Error! Reference source not found.)
NA	Diesel fuel spill	A spill of 400L of diesel fuel at 99 King Street East in 2005	• Environmental Source Information (Section 4.2)
NA	Demolition waste storage at 90 King Street East	A demolition company was historically located at 90 King Street East	• Environmental Source Information (Section 4.2)

Breaker Technology Ltd was established in 1961. Fill material was noted at 35 Elgin Street in the 1988 aerial image. As noted above, fill can potentially introduce contamination to a Site, depending on its source zone land use. This parcel is also currently used for equipment manufacturing, and has been developed for use since sometime prior to 1962. This type of land activity has the potential to utilize bulk chemical products (gasoline, hydraulic oil, etc). Information obtained through the EcoLog ERIS indicates that the company lists various waste classes including waste oils & lubricants, PCBs, petroleum distillates, and solvents since 1986. This land use is also listed as an NPRI under the EcoLog ERIS records, however it was not present in the active NPRI database. Although the fill material and land use has the potential to introduce contamination into the area, there is no evidence of significant contamination at the site. In addition, the parcel is located down gradient from the Phase I Property, and therefore any contamination would migrate away from the Site, toward Georgian Bay.

The CN railway was historically located immediately north of the Phase I Property within PIN 371410085. This line was originally completed in 1872 and was formerly abandoned in 1984. Railways are typically considered an environmental concern due to potential transport of bulk liquids, the pesticides, fungicides, or herbicides sprayed along the rail corridor, and the chemicals used to treat the wood used in rail construction. The Georgian Trail opened in 1989 and has been used for recreational purposes since this

time. Since there is no evidence of large scale contamination from the historic CN railway, it is not considered an environmental concern to the Phase I Property.

The 14 Elgin Street parcel has been developed for use since sometime prior to 1973. This business was reportedly established in the 1960s and has been located at this location since its inception. Information obtained through the Site Reconnaissance work (Section 6.0) indicates that bulk chemical products (i.e. solvents) have not been used in the past 12 years of operation. No bulk chemicals were noted during the Site Reconnaissance investigation. Although the presence of a metal fabrication shop has the potential to contaminate the soil and ground water, there is no evidence that any significant product release has occurred. This land use is therefore not a significant environmental concern to the Phase I Property.

The structure located at 90 King Street East was originally built in the 1880s and has historically been used as an apple processing facility, however the structure was reportedly re built in 1932 after a fire. It is understood that this facility was used to wash and package apples for shipping via the adjacent CN rail corridor. It is currently the home of the Thornbury Village Cidery. Information obtained through the EcoLog ERIS indicates that the Thornbury Village Cidery generates waste oil and lubricants at this location since 2007. It is anticipated that this waste is generated by the equipment used in apple processing and cider packaging. An EcoLog ERIS record also lists this parcel as the location of San-Mar Environmental Group Ltd, a demolition company. This company generated wrecking and demolition waste between 1997 and 2001. Although the presence of this historical structure and current waste oil production has the potential to contaminate the soil and ground water, there is no evidence that any significant product release has occurred. Any significant contamination would also flow trans-gradient to the Phase I Property, toward Georgian Bay. This land use is therefore not a significant environmental concern to the Phase I Property.

Information obtained from the EcoLog ERIS report indicates that a 400L diesel spill occurred at 99 King Street East in 2005. The fuel reportedly came from a transport truck, likely within the shopping plaza parking lot. The quantity of fuel released into the environment is significant, however the record listed the environmental impact as “not anticipated”. Although the quantity of material exposed to the environment is significant, any hydrocarbon contamination has likely degraded in the ~15 years since the incident. The location of the spill is also located cross-gradient to the Phase I Property, so any migration or transport is considered low. This record is therefore not considered a significant environmental concern to the Phase I Property.

Based on the above discussion, none of the offsite PCAs are considered a significant environmental concern to the Phase I Property.

6.5 Areas of Potential Environmental Concern

Based on Section 6.4 there are no *areas of potential environmental concern* (APEC) associated with the PCAs identified within the Phase I Property and Phase I Study Area.

7.0 CONCLUSIONS

The Phase I ESA identified one PCA for the Phase I Property and seven PCAs for the Phase I Study Area. Based on the information reviewed as part of the current assessment, none of the identified PCAs are considered significant, and therefore no APECs have been identified for the Phase I Property.

Based upon the information provided above, no additional work is recommended for the Phase I Property.

8.0 LIMITATIONS AND USE OF THIS REPORT

This report has been prepared for the sole benefit of Hamraz Toor (the ‘Client’). Azimuth Environmental Consulting, Inc. (the ‘Consultant’) understands that this report may be provided to and relied upon by others. Any other person or entity without the express written consent of the Consultant and the Client may not rely upon the report. Any use that a party makes of this report, or any reliance on decisions made based on it, is the responsibility of such parties. The Consultant accepts no responsibility for damages, if any, suffered by any party as a result of decisions made or actions based on this report.

The information and conclusions contained in this report are based upon work undertaken by trained professional and technical staff in accordance with generally accepted engineering and scientific practices current at the time the work was performed. This report should in no way be construed as a definitive representation of any or all environmental impacts on the site resulting from past or current practices. The information contained within this report should be evaluated, interpreted, and implemented only in light of this assignment.

The Consultant makes no other representation whatsoever, including those concerning the legal significance of its findings, or as to the other legal matters addressed incidentally in this report, including but not limited to the application of any law to the facts set forth herein. With respect to regulatory compliance issues, regulatory statutes

are subject to interpretation. These interpretations may change over time, thus the Client should review such issues with appropriate legal counsel.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory:

Provincial

[AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial

[AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2018

Abandoned Mine Information System:

Provincial

[AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Nov 2016

Anderson's Waste Disposal Sites:

Private

[ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Automobile Wrecking & Supplies:

Private

[AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Jan 31, 2019

Borehole:

Provincial

[BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2014

Certificates of Approval:

Provincial

[CA](#)

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Commercial Fuel Oil Tanks:

Provincial

CFOT

List of commercial underground fuel oil tanks made available by the Fuels Safety Program of the Technical Standards & Safety Authority (TSSA). Ontario Regulation 213/01 of the Technical Standards and Safety Act (2000) requires that all underground tanks be registered with the TSSA. Note: the Fuels Safety Division does not register waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of commercial fuel tanks in the province. The TSSA updates information in its system on an ongoing basis; this listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Chemical Register:

Private

CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2019

Compressed Natural Gas Stations:

Private

CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 - Dec 2018

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial

COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial

CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Jan 2019

Certificates of Property Use:

Provincial

CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Feb 28, 2019

Drill Hole Database:

Provincial

DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Oct 2018

Dry Cleaning Facilities:

Federal

DRYCLEANERS

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2017

Environmental Activity and Sector Registry:

Provincial

EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval). Please see our ECA database.

Government Publication Date: Oct 2011-Feb 28, 2019

Environmental Registry:

Provincial

EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Feb 28, 2019

Environmental Compliance Approval:

Provincial

ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Feb 28, 2019

Environmental Effects Monitoring:

Federal

EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private

EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Jan 31, 2019

Environmental Issues Inventory System:

Federal

EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial

EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

List of TSSA Expired Facilities:

Provincial

EXP

List of facilities and tanks - for which there was once a registration - no longer registered with the Fuels Safety Program of the Technical Standards and Safety Authority (TSSA). Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. Tanks which have been removed from the ground are included in the expired facilities inventory held by the TSSA. Notes: the Fuels Safety Division did not register private fuel underground/aboveground storage tanks prior to January of 1990, or furnace oil tanks prior to May 1, 2002; nor does the Division register waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Federal Convictions:

Federal

FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal

FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

Government Publication Date: Jun 2000-Oct 2018

Fisheries & Oceans Fuel Tanks:

Federal

FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2018

Fuel Storage Tank:

Provincial

FST

List of registered private and retail fuel storage tanks made available by the Fuels Safety Program of the Technical Standards & Safety Authority (TSSA). Ontario Regulation 213/01 of the Technical Standards and Safety Act (2000) requires that all underground tanks be registered with the TSSA. Notes: the Fuels Safety Division did not register private fuel underground/aboveground storage tanks prior to January of 1990, or furnace oil tanks prior to May 1, 2002; nor does the Division register waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of fuel storage tanks/tank facilities in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Fuel Storage Tank - Historic:

Provincial

FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Dec 31, 2018

Greenhouse Gas Emissions from Large Facilities:

Federal

GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2016

TSSA Historic Incidents:

Provincial

HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

TSSA Incidents:Provincial [INC](#)

List of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC) and made available by the Technical Standards and Safety Authority (TSSA). Under the Technical Standards & Safety Act (2000), the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors, and equipment or appliances that use fuels. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Landfill Inventory Management Ontario:Provincial [LIMO](#)

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Sep 30, 2017

Canadian Mine Locations:Private [MINE](#)

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Environmental Penalty Annual Report:Provincial [MISA PENALTY](#)

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2017

Mineral Occurrences:Provincial [MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Jan 2018

National Analysis of Trends in Emergencies System (NATES):Federal [NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:Provincial [NCPL](#)

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2016

National Defense & Canadian Forces Fuel Tanks:Federal [NDFT](#)

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal

NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites:

Federal

NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal

NEBI

Locations of pipeline incidents from 2008 to present, made available by the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Sep 30, 2018

National Energy Board Wells:

Federal

NEBW

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets 'or Trends' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017

Oil and Gas Wells:

Private

OGW

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Feb 28, 2019

Ontario Oil and Gas Wells:

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSRLibrary has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-May 2018

Inventory of PCB Storage Sites:

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders:

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Feb 28, 2019

Canadian Pulp and Paper:

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks:

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial

PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: 1988-Sep 2018

TSSA Pipeline Incidents:

Provincial

PINC

List of pipeline incidents (strikes, leaks, spills) made available by the Technical Standards and Safety Authority (TSSA). Under the Technical Standards & Safety Act (2000), the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors, and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of pipeline incidents in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Private and Retail Fuel Storage Tanks:

Provincial

PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial

PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Feb 28, 2019

Ontario Regulation 347 Waste Receivers Summary:

Provincial

REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition:

Provincial

RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Jan 2019

Retail Fuel Storage Tanks:

Private

RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Jan 31, 2019

Scott's Manufacturing Directory:

Private

SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial

SPL

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Dec 2018

Wastewater Discharger Registration Database:

Provincial

SRDS

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2016

Anderson's Storage Tanks:

Private

TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal

TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Aug 2018

TSSA Variances for Abandonment of Underground Storage Tanks:

Provincial

VAR

List of variances granted for abandoned tanks. Under the Technical Standards and Safety Authority (TSSA) Liquid Fuels Handling Code and Fuel Oil Code, all underground storage tanks must be removed within two years of disuse. If removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of tank variances in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Waste Disposal Sites - MOE CA Inventory:

Provincial

[WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Feb 28, 2019

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

[WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Dec 31, 2017

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

County or District

GREY

Township, Village, Town or City THORNHURST

Date completed 25 61

(day month year)

Address

Casing and Screen Record

Inside diameter of casing 6 1/2"
Total length of casing all casing withdrawn
Type of screen nil
Length of screen nil
Depth to top of screen nil
Diameter of finished hole 6 1/2"

Pumping Test

Static level nil
Test-pumping rate nil G.P.M.
Pumping level nil
Duration of test pumping nil
Water clear or cloudy at end of test nil
Recommended pumping rate nil G.P.M.
with pump setting of nil feet below ground surface

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Appendix: Database Descriptions

*Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory:

Provincial

[AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial

[AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2020

Abandoned Mine Information System:

Provincial

[AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

Anderson's Waste Disposal Sites:

Private

[ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Provincial

[AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Private

[AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Dec 31, 2020

Borehole:

Provincial

[BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2018

Commercial Fuel Oil Tanks:

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Chemical Manufacturers and Distributors:

Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register:

Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Dec 31, 2020

Compressed Natural Gas Stations:

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Apr 2021

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Nov 2020

Certificates of Property Use:

Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Apr 30, 2021

Drill Hole Database:

Provincial

[DRL](#)

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2020

Delisted Fuel Tanks:

Provincial

[DTNK](#)

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Jul 31, 2020

Environmental Activity and Sector Registry:

Provincial

[EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval). Please see our ECA database.

Government Publication Date: Oct 2011-Apr 30, 2021

Environmental Registry:

Provincial

[EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Apr 30, 2021

Environmental Compliance Approval:

Provincial

[ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011- Apr 30, 2021

Environmental Effects Monitoring:

Federal

[EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private

[EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Jan 31, 2021

Environmental Issues Inventory System:

Federal

[EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial

EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

Environmental Penalty Annual Report:

Provincial

EPAR

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2020

List of Expired Fuels Safety Facilities:

Provincial

EXP

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Federal Convictions:

Federal

FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal

FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Apr 2021

Fisheries & Oceans Fuel Tanks:

Federal

FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Federal

FRST

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank:

Provincial

FST

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Fuel Storage Tank - Historic:

Provincial

FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Apr 30, 2021

Greenhouse Gas Emissions from Large Facilities:

Federal

GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2019

TSSA Historic Incidents:

Provincial

HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Provincial

INC

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing is a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Landfill Inventory Management Ontario:

Provincial

LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Feb 28, 2019

Canadian Mine Locations:

Private

MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial

MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Dec 2020

National Analysis of Trends in Emergencies System (NATES):

Federal

NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:

Provincial

NCPL

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2019

National Defense & Canadian Forces Fuel Tanks:

Federal

NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal

NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites:

Federal

NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal

NEBI

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Mar 31, 2021

National Energy Board Wells:

Federal

NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003***National PCB Inventory:**

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008***National Pollutant Release Inventory:**

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017**Oil and Gas Wells:**

Private

OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Feb 28, 2021**Ontario Oil and Gas Wells:**

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Jun 2020**Inventory of PCB Storage Sites:**

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013**Orders:**

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Apr 30, 2021**Canadian Pulp and Paper:**

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014**Parks Canada Fuel Storage Tanks:**

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011-Apr 30, 2021

Pipeline Incidents:

Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing is an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Oct 31, 2020

Private and Retail Fuel Storage Tanks:

Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Apr 30, 2021

Ontario Regulation 347 Waste Receivers Summary:

Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2018

Record of Site Condition:

Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-May 2021

Retail Fuel Storage Tanks:

Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Dec 31, 2020

Scott's Manufacturing Directory:

Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial SPL

List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Aug 2020

Wastewater Discharger Registration Database:

Provincial

[SRDS](#)

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2018

Anderson's Storage Tanks:

Private

[TANK](#)

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal

[TCFT](#)

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Dec 2020

Variances for Abandonment of Underground Storage Tanks:

Provincial

[VAR](#)

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Waste Disposal Sites - MOE CA Inventory:

Provincial

[WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Apr 30, 2021

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

[WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30th, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Apr 30, 2021

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Notice of Collection of Personal Information

Personal information contained on this form is collected pursuant to sections 35-50 and 75(2) of the *Ontario Water Resources Act* and section 16.3 of the Wells Regulation. This information will be used for the purpose of maintaining a public record of wells in Ontario. This form and the information contained on the form will be stored in the Ministry's well record database and made publicly available. Questions about this collection should be directed to the Water Well Customer Service Representative at the Wells Help Desk, 125 Resources Road, Toronto Ontario M9P 3V6, at 1-888-396-9355 or wellshelpdesk@ontario.ca.

Notice of Collection of Personal Information

Personal information contained on this form is collected pursuant to sections 35-50 and 75(2) of the *Ontario Water Resources Act* and section 16.3 of the Wells Regulation. This information will be used for the purpose of maintaining a public record of wells in Ontario. This form and the information contained on the form will be stored in the Ministry's well record database and made publicly available. Questions about this collection should be directed to the Water Well Customer Service Representative at the Wells Help Desk, 125 Resources Road, Toronto Ontario M9P 3V6, at 1-888-396-9355 or wellshelpdesk@ontario.ca.

Fields marked with an asterisk (*) are mandatory.

Well Tag Number *

A 300254

Type *

☒ Construction ☐ Abandonment

Measurement recorded in: *

☐ Metric ☒ Imperial

1. Well Owner's Information

Last Name and First Name, or Organization is mandatory. *

Last Name | First Name

Organization | Email Address

The Blue Mountains Attainable Housing Corporation

Current Address

3. Overburden and Bedrock Material *

Well Depth * | 20 | (ft)

General Colour	Most Common Material	Other Materials	General Description	Depth From	Depth To
----------------	----------------------	-----------------	---------------------	------------	----------

				(ft)	(ft)
Brown	Silt	Sand	Gravel	0	5
Grey	Silt	Sand	Till	5	15
Grey	Sand	Silt		15	18
Grey	Sand	Gravel		18	20

4. Annular Space *

Depth From (ft)	Depth To (ft)	Type of Sealant Used (Material and Type)	Volume Placed (cubic feet)
0	1	Cement	0.134
0	13	Bentonite	2.141
13	20	Sand	1.200

5. Method of Construction *

- ☐ Cable Tool ☐ Rotary (Conventional) ☐ Rotary (Reverse) ☐ Boring ☐ Air percussion ☐ Diamond
☐ Jetting ☐ Driving ☐ Digging ☐ Rotary (Air) ☒ Augering ☐ Direct Push
☐ Other (specify) _____

6. Well Use *

- ☐ Public ☐ Industrial ☐ Cooling & Air Conditioning
☐ Domestic ☐ Commercial ☐ Not Used
☐ Livestock ☐ Municipal ☒ Monitoring
☐ Irrigation ☐ Test Hole ☐ Dewatering
☐ Other (specify) _____

7. Status of Well *

- ☐ Water Supply ☐ Replacement Well ☐ Test Hole
☐ Recharge Well ☐ Dewatering Well ☒ Observation and/or Monitoring Hole
☐ Alteration (Construction) ☐ Abandoned, Insufficient Supply ☐ Abandoned, Poor Water Quality
☐ Abandoned, other (specify) _____
☐ Other (specify) _____

8. Construction Record - Casing * (use negative number(s) to indicate depth above ground surface)

Inside Diameter (in)	Open Hole or Material (Galvanized, Fibreglass, Concrete, Plastic, Steel)	Wall Thickness	Depth From (ft)	Depth To (ft)
2	Plastic	0.154	-3	15
4	Steel	0.25	-3	1

9. Construction Record - Screen

Outside Diameter (in)	Material (Plastic, Galvanized, Steel)	Slot Number	Depth From (ft)	Depth To (ft)
2.375	Plastic	0.01	15	20

10. Water Details

Water found at Depth 15 (ft) ☐ Gas Kind of water ☐ Fresh ☒ Untested ☐ Other

11. Hole Diameter

Depth From (ft)	Depth To (ft)	Diameter (in)
0	20	6

12. Results of Well Yield Testing

☐ Pumping Discontinued

Explain

If flowing give rate

☐ Flowing (GPM)

Draw down

Time (min)	Static Level	1	2	3	4	5	10	15	20	25	30	40	50	60
Water Level (ft)	15													

Recovery

Time (min)	1	2	3	4	5	10	15	20	25	30	40	50	60
Water Level (ft)													

After test of well yield, water was

☐ Clear and sand free ☐ Other (specify)

Pump intake set at (ft)	Pumping rate (GPM)	Duration of pumping hrs + min	Final water level end of pumping (ft)	Disinfected? * ☐ Yes ☒ No
-------------------------	--------------------	-------------------------------	---------------------------------------	---

Recommended pump depth (ft)	Recommended pump rate (GPM)	Well production (GPM)
-----------------------------	-----------------------------	-----------------------

13. Map of Well Location *

Map 1. Please Click the map area below to import an image file to use as the map. ☒ Make map area bigger
