

2026 Fees and Charges

The Town's Fees and Charges are reviewed annually as part of the annual Operating Budget. When reviewing and preparing the 2026 Fees and Charges, staff considered end user affordability, user flexibility, maximizing facility use, neighbouring municipality comparisons and community benefit.

When reviewing the Fees and Charges, the Town follows the exercise of inflating all fees and charges by the Cost of Living Allowance, rounding to the nearest whole dollar, that is also applied to Staff Salaries. Staff are then advised to review the inflated fee or charge, make changes and provide justification. Staff are advised to review fees and charges and to remove any that are no longer charged, are already covered within a separate town by-law, etc. Staff also use this time to add any fees and charges they feel the Town should be charging. Reasoning is provided for any fees or charges that are increasing or decreasing outside of the inflated amount.

The following tables illustrate the proposed updates to the 2025 Fees and Charges By-law. Any fees that are being recommended to remove from the by-law will be in red font. Any new fees that are being recommended to be added to the bylaw will be in green front.

Engineering and Planning fees have been left out of this document as they are being presented separately to Council in 2025 following their review by an external consultant. Once approved, they will be added into the fees and charges by-law.

Water Consumption Appeal Process

It is the responsibility of the property owner or the tenant of the property to maintain the property in good repair. Any faulty plumbing should be repaired in a timely manner. From time to time, however, there may be plumbing problems that are not easily detected, which may result in higher than usual water consumption. The Town will only consider an appeal if reasonable care has been taken to maintain the property. Appeals will only be considered after all other avenues have been exhausted.

The intent of the appeal process is to assist those residential water users previously on flat rate billing, that are either unaware of the fact that they had leaking plumbing, or are unaware of the impact the leaking plumbing will have on their utility bill now based in part on consumption flow. The adjustment will assist the property owner to understand the relationship between the volume of water used and the resulting cost. This appeal process is established to authorize a one-time only reduction to metered water consumption due to a faulty plumbing problem (for example a leaky water faucet or a leaking toilet) but does not include loss of water due to frozen pipes, water cooled air conditioners and water pressure sump pumps.

A request for an adjustment to water consumption must be made in writing to the Town; within 30 days from the utility bill statement date for the period that the problem occurred. An appeal will only be considered for the period in which the problem occurred. The requester will explain the nature of the problem, the length of time that the problem was in effect, and will confirm that the problem has since been corrected; paid invoices indicating that repairs were made to correct the problem may be required upon the Town's request. Additional information or documentation may also be required at the discretion of the Town. All decisions of the Town are final.

Water charges and sewer charges are each comprised of a fixed charge and a charge based on metered water consumption. Consideration will be given to reducing the charges based on water consumption only. Any reduction will apply to the water consumption charge and, where applicable, to the sewer charge based on water consumption; the fixed charges will not be adjusted.

The billing adjustment will be the difference between the utility customer's estimated normal water consumption for the period under review and their actual water consumption for that period in cubic metres, multiplied by the total of the water consumption charge plus the sewer charge based on water consumption (where applicable) in effect for that period. The maximum billing adjustment will be 80% of the actual water consumption charge and if applicable the associated sewer consumption charge. The estimated normal water consumption for the period under review will be determined by the Town in consultation with the utility customer, but the Town's determination will be final. Adjustments will not be made where the difference is less than \$5. Any adjustment will be posted to the utility customer's account.

An adjustment may be made to metered water consumption or sewer charges with the approval of the Director of Finance and IT Services.
