Preliminary Engineering for Peel Street Reconstruction

On behalf of the Town of the Blue Mountains, MTE is mailing out this letter to introduce the preliminary engineering for the reconstruction of Peel Street. The purpose of the project is to develop a preliminary design for the reconstruction of Peel Street. This project will be mostly Development Charges funded. The Development Charges Background Study reports that Peel Street is to be reconstructed to an urban cross section including a paved surface with curbs, sidewalks, street trees and street illumination along with upgrades to the underground infrastructure. Improving site lines, drainage, and vertical and horizontal alignment of the roadway will also be addressed. The engineering tasks will commence over the next few weeks, beginning with geotechnical field work.

Preliminary Engineering plans will be presented at a Public Information Centre (PIC), where there will be the opportunity to provide feedback on the proposed designs. Additionally, the PIC is an opportunity to provide any helpful information about the project area that may not be represented in the design. Further information about the timing of the PIC will be shared once the dates have been established.

We would appreciate any feedback, input and comments outlining any concerns and questions you may have regarding the proposed work in this area. Please feel free to contact [REDACTED] (519)599-3131 ext. 275 or Vince Pugliese vpugliese@mte85.com (519) 743-6500 ext. 1347

Respectfully,

MTE CONSULTANTS INC.

Vince Pugliese, P.Eng.
Project Manager
